

TLV702-Q1 300mA、低 I_Q 、低压降稳压器

1 特性

- 符合汽车应用 应用
- 具有符合 AEC-Q100 的下列结果：
 - 器件温度 1 级：-40°C 至 125°C 的环境运行温度范围
 - 器件人体放电模型 (HBM) 静电防护 (ESD) 分类等级 H2
 - 器件 CDM ESD 分类等级 C4B
- 极低压降：
 - 在 $I_{\text{输出}} = 50\text{mA}$ 并且 $V_{\text{输出}} = 2.8\text{V}$ 时，为 37mV
 - 在 $I_{\text{输出}} = 100\text{mA}$ 并且 $V_{\text{输出}} = 2.8\text{V}$ 时，为 75mV
 - 在 $I_{\text{输出}} = 300\text{mA}$ 并且 $V_{\text{输出}} = 2.8\text{V}$ 时，为 220mV
- 在工作温度范围内，精度为 2%
- 低 I_Q ：35 μA
- 可提供从 1.2V 至 4.8V 的固定输出电压组合
- 高电源抑制比 (PSRR)：频率 1kHz 时为 68dB
- 与 0.1 μF ⁽¹⁾ 有效电容一起工作时保持稳定
- 热关断及过流保护
- 封装：5 引脚 SOT (DBV 和 DDC) 和 1.5mm × 1.5mm、6 引脚 WSON

(1) 请参阅应用信息 部分中的输入和输出电容器要求。

2 应用

- 汽车摄像机模块
- 图像传感器电源
- 微处理器轨
- 汽车信息娱乐音响主机
- 汽车车身电子设备

3 说明

TLV702-Q1 系列低压降 (LDO) 线性稳压器是具有出色 Line transient 和 load transient 性能的低静态电流器件。这些 LDO 专为功耗敏感型 应用而设计。

一个高精度频带隙和一个误差放大器提供 2% 的总精度。此系列器件具有低输出噪声、极高电源抑制比 (PSRR) 和低压降电压，因此是各种电池供电设备的理想选择。所有器件版本均具有热关断和电流限制保护以保证安全。

此外，这些器件还能在采用仅 0.1 μF 的有效输出电容时保持稳定。这一特性允许使用具有较高偏置电压和温度降额的成本有效电容器。这些器件在不产生输出负载的情况下可调节至特定的精度。

TLV702-Q1 系列 LDO 线性稳压器采用 SOT 和 WSON 封装。

器件信息⁽¹⁾

器件型号	封装	封装尺寸 (标称值)
TLV702-Q1	小外形尺寸晶体管 (SOT) (5)	2.90mm × 1.60mm
	WSON (6)	1.50mm × 1.50mm

(1) 如需了解所有可用封装，请参阅数据表末尾的封装选项附录。

4 修订历史记录

注：之前版本的页码可能与当前版本有所不同。

Changes from Revision C (January 2018) to Revision D	Page
• Changed OUT pin number from 5 to 3 in DSE column of <i>Pin Functions</i> table	3
• Added footnote to maximum EN voltage specification	4
• Added parameter names to <i>Recommended Operating Conditions</i> table	4

Changes from Revision B (June 2015) to Revision C	Page
• 已添加 向文档添加了 DBV 封装	1
• 已更改 更改了封装 特性 项目符号以将 DBV 封装包括在内	1
• Added DBV package to <i>Pin Configuration and Functions</i> section	3
• Added DBV column to <i>Thermal Information</i> table	4
• Changed title of <i>Layout Example for the DDC and DBV Packages</i> figure to include DBV package	15

Changes from Revision A (August 2013) to Revision B	Page
• 向数据表添加了 DSE（6 引脚 WSON）封装	1
• 向数据表添加了器件信息、ESD 额定值 和建议运行条件 表，以及详细 说明、应用和实施、电源建议、布局、器件和文档支持，以及机械、封装和可订购信息 部分	1
•	1
• 在精度为 2% 中添加了“在工作温度范围内”特性项目符号中将“可编程”改为“可调节”	1
• 在整篇数据表中将 DDC 封装名称从 TSOT23 更改为 SOT	1
• 已更改应用 要点的措辞	1
• 更改了说明 部分的文本	1
• 将典型应用电路 上的陶瓷电容单位从 mF 更改成了 μ F（拼写错误）	1
• Changed "free-air temperature" to "junction temperature" in <i>Absolute Maximum Ratings</i> condition statement	4
• Added T_J to T_A condition in <i>Electrical Characteristics</i> condition statement	5
• Changed T_A to T_J for typical values in <i>Electrcial Characteristics</i> condition statement	5

5 Pin Configuration and Functions

Pin Functions

NAME	PIN		I/O	DESCRIPTION
	DDC, DBV (SOT)	DSE (WSON)		
IN	1	1	I	Input pin. A small, 1- μ F ceramic capacitor is recommended from this pin to ground to assure stability and good transient performance. See Input and Output Capacitor Requirements in the <i>Application Information</i> section for more details.
GND	2	2	—	Ground pin
EN	3	6	I	Enable pin. Driving EN over 0.9 V turns on the regulator. Driving EN below 0.4 V puts the regulator into shutdown mode and reduces operating current to 1 μ A, nominal.
NC	4	4, 5	—	No connection. Tie this pin to ground to improve thermal dissipation.
OUT	5	3	O	Regulated output voltage pin. A small, 1- μ F ceramic capacitor is needed from this pin to ground for stability. See Input and Output Capacitor Requirements in the <i>Application Information</i> section for more details.

6 Specifications

6.1 Absolute Maximum Ratings

over operating junction temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Voltage ⁽²⁾	IN	−0.3	6	V
	EN	−0.3	6 ⁽³⁾	V
	OUT	−0.3	6	V
Current (source)	OUT	Internally limited		A
Output short-circuit duration		Indefinite		
Temperature	Operating virtual junction, T _J	−55	150	°C
	Storage, T _{stg}	−55	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to network ground terminal.
- (3) The absolute maximum rating is V_{IN} + 0.3 V or 6.0 V, whichever is smaller.

6.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 ⁽¹⁾	±2000	V
		Charged-device model (CDM), per AEC Q100-011	±750	

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V _{IN}	Input voltage	2		5.5	V
V _{OUT}	Output voltage	1.2		4.8	V
I _{OUT}	Output current	0		300	mA
T _A	Ambient temperature	−40		125	°C
T _J	Operating virtual junction temperature	−40		125	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TLV702-Q1			UNIT
		DDC (SOT)	DBV (SOT)	DSE (WSON)	
		5 PINS	5 PINS	6 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	262.8	249.2	321.3	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	68.2	136.4	207.9	°C/W
R _{θJB}	Junction-to-board thermal resistance	81.6	85.9	281.5	°C/W
ψ _{JT}	Junction-to-top characterization parameter	1.1	19.5	42.4	°C/W
ψ _{JB}	Junction-to-board characterization parameter	80.9	85.3	284.8	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	N/A	N/A	142.3	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

At $V_{IN} = V_{OUT(nom)} + 0.5\text{ V}$ or 2 V (whichever is greater); $I_{OUT} = 10\text{ mA}$, $V_{EN} = 0.9\text{ V}$, $C_{OUT} = 1\text{ }\mu\text{F}$, and T_J , $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$, unless otherwise noted. Typical values are at $T_J = 25^\circ\text{C}$.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
	DC output accuracy		-2%	0.5%	2%	
$\Delta V_{O(\Delta V)}$	Line regulation	$V_{OUT(nom)} + 0.5\text{ V} \leq V_{IN} \leq 5.5\text{ V}$, $I_{OUT} = 10\text{ mA}$		1	5	mV
$\Delta V_{O(\Delta I)}$	Load regulation	$0\text{ mA} \leq I_{OUT} \leq 300\text{ mA}$		1	15	mV
V_{DO}	Dropout voltage ⁽¹⁾	$V_{IN} = 0.98 \times V_{OUT(nom)}$, $I_{OUT} = 300\text{ mA}$		260	375	mV
I_{CL}	Output current limit	$V_{OUT} = 0.9 \times V_{OUT(nom)}$	320	500	860	mA
I_{GND}	Ground pin current	$I_{OUT} = 0\text{ mA}$		35	55	μA
		$I_{OUT} = 300\text{ mA}$, $V_{IN} = V_{OUT} + 0.5\text{ V}$		370		μA
I_{SHDN}	Ground pin current (shutdown)	$V_{EN} \leq 0.4\text{ V}$, $V_{IN} = 2\text{ V}$		400		nA
		$V_{EN} \leq 0.4\text{ V}$, $2\text{ V} \leq V_{IN} \leq 4.5\text{ V}$		1	2.5	μA
PSRR	Power-supply rejection ratio	$V_{IN} = 2.3\text{ V}$, $V_{OUT} = 1.8\text{ V}$, $I_{OUT} = 10\text{ mA}$, $f = 1\text{ kHz}$		68		dB
V_n	Output noise voltage	$BW = 100\text{ Hz to }100\text{ kHz}$, $V_{IN} = 2.3\text{ V}$, $V_{OUT} = 1.8\text{ V}$, $I_{OUT} = 10\text{ mA}$		48		μV_{RMS}
t_{STR}	Start-up time ⁽²⁾	$C_{OUT} = 1\text{ }\mu\text{F}$, $I_{OUT} = 300\text{ mA}$		100		μs
$V_{EN(high)}$	Enable pin high (enabled)		0.9		V_{IN}	V
$V_{EN(low)}$	Enable pin low (disabled)		0		0.4	V
I_{EN}	Enable pin current	$V_{IN} = V_{EN} = 5.5\text{ V}$		0.04		μA
UVLO	Undervoltage lockout	V_{IN} rising		1.9		V
T_{sd}	Thermal shutdown temperature	Shutdown, temperature increasing		165		$^\circ\text{C}$
		Reset, temperature decreasing		145		$^\circ\text{C}$

(1) V_{DO} is measured for devices with $V_{OUT(nom)} \geq 2.35\text{ V}$.

(2) Start-up time = time from EN assertion to $0.98 \times V_{OUT(nom)}$.

6.6 Typical Characteristics

Over operating temperature range ($T_J = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$), $V_{IN} = V_{OUT(nom)} + 0.5\text{ V}$ or 2 V , whichever is greater; $I_{OUT} = 10\text{ mA}$, $V_{EN} = V_{IN}$, $C_{OUT} = 1\text{ }\mu\text{F}$, unless otherwise noted. Typical values are at $T_J = 25^{\circ}\text{C}$.

7 Detailed Description

7.1 Overview

The TLV702-Q1 series of low-dropout (LDO) linear regulators are low quiescent current devices with excellent line and load transient performance. These LDOs are designed for power-sensitive applications. A precision bandgap and error amplifier provides overall 2% accuracy. Low output noise, very high power-supply rejection ratio (PSRR), and low dropout voltage make this series of devices ideal for most battery-operated handheld equipment. All device versions have integrated thermal shutdown, current limit, and undervoltage lockout (UVLO) protections.

7.2 Functional Block Diagrams

Figure 23. TLV702-Q1 Block Diagram

7.3 Feature Description

7.3.1 Internal Current Limit

The TLV702-Q1 internal current limit protection helps to protect the regulator during fault conditions. During current limit operation, the output sources a fixed amount of current that is largely independent of the output voltage. In such a case, the output voltage is not regulated, and is $V_{OUT} = I_{CL} \times R_{LOAD}$. The PMOS pass transistor dissipates $(V_{IN} - V_{OUT}) \times I_{CL}$ until thermal shutdown is triggered and the device turns off. As the device cools, the device is turned on by the internal thermal shutdown circuit. If the fault condition continues, the device cycles between current limit operation and thermal shutdown. See [Thermal Consideration](#) for more details.

The PMOS pass element in the TLV702-Q1 has a built-in body diode that conducts current when the voltage at the OUT pin exceeds the voltage at IN. This current is not limited; if extended reverse-voltage operation is anticipated, externally limit the output current to 5% of the rated I_{OUT} specification.

Feature Description (continued)

7.3.2 Shutdown

The enable pin (EN) is active high. The device is enabled when voltage at EN pin exceeds 0.9 V. The device is turned off when the EN pin is held at less than 0.4 V. When shutdown capability is not required, connect the EN pin to the IN pin.

7.3.3 Dropout Voltage

The TLV702-Q1 uses a PMOS pass transistor to achieve low dropout. When $(V_{IN} - V_{OUT})$ is less than the dropout voltage (V_{DO}), the PMOS pass device is in the linear (triode) region of operation. The input-to-output resistance is equal to the drain-source on-state resistance ($R_{DS(on)}$) of the PMOS pass element. V_{DO} scales approximately with output current because the PMOS device behaves as a resistor in dropout.

As with any linear regulator, PSRR and transient response are degraded as $(V_{IN} - V_{OUT})$ approaches dropout. This effect is shown in [Figure 13](#).

7.3.4 Undervoltage Lockout

The TLV702-Q1 uses a UVLO circuit to keep the output shut off until internal circuitry is operating properly.

7.4 Device Functional Modes

7.4.1 Normal Operation

The device regulates to the nominal output voltage under the following conditions:

- The input voltage is greater than the nominal output voltage added to the dropout voltage.
- The output current is less than the current limit.
- The input voltage is greater than the UVLO voltage.

7.4.2 Dropout Operation

If the input voltage is less than the nominal output voltage plus the specified dropout voltage, but all other conditions are met for normal operation, the device operates in dropout mode. In this condition, the output voltage is the same as the input voltage minus the dropout voltage. The transient performance of the device is significantly degraded because the pass device is in a triode state and no longer regulates the output voltage of the LDO. Line or load transients in dropout may result in large output voltage deviations.

[Table 1](#) lists the conditions that lead to the different modes of operation.

Table 1. Device Functional Mode Comparison

OPERATING MODE	PARAMETER	
	V_{IN}	I_{OUT}
Normal mode	$V_{IN} > V_{OUT(nom)} + V_{DO}$	$I_{OUT} < I_{CL}$
Dropout mode	$V_{IN} < V_{OUT(nom)} + V_{DO}$	$I_{OUT} < I_{CL}$
Current limit	$V_{IN} > UVLO$	$I_{OUT} > I_{CL}$

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TLV702-Q1 belongs to a new family of next-generation value LDO regulators. These devices consume low quiescent current and deliver excellent line and load transient performance. These characteristics, combined with low noise and very good PSRR with little ($V_{IN} - V_{OUT}$) headroom, make this family of devices ideal for portable RF applications. This family of regulators offers current limit and thermal protection, and is specified from -40°C to $+125^{\circ}\text{C}$.

8.2 Typical Application

Figure 24. Typical Application Circuit

8.2.1 Design Requirements

Table 2 lists the design parameters.

Table 2. Design Parameters

PARAMETER	DESIGN REQUIREMENT
Input voltage	2.5 V to 3.3 V
Output voltage	1.8 V
Output current	100 mA

8.2.2 Detailed Design Procedure

8.2.2.1 Input and Output Capacitor Requirements

1- μ F X5R- and X7R-type ceramic capacitors are recommended because these capacitors have minimal variation in value and equivalent series resistance (ESR) over temperature.

However, the TLV702-Q1 is designed to be stable with an *effective capacitance* of 0.1 μ F or larger at the output. Thus, the device is stable with capacitors of other dielectric types as well, as long as the effective capacitance under operating bias voltage and temperature is greater than 0.1 μ F. This effective capacitance refers to the capacitance that the LDO sees under operating bias voltage and temperature conditions; that is, the capacitance after taking both bias voltage and temperature derating into consideration. In addition to allowing the use of lower-cost dielectrics, this capability of being stable with 0.1- μ F effective capacitance also enables the use of smaller footprint capacitors that have higher derating in size- and space-constrained applications.

Using a 0.1- μ F rated capacitor at the output of the LDO does not ensure stability because the effective capacitance under the specified operating conditions must not be less than 0.1 μ F. Maximum ESR should be less than 200 m Ω .

Although an input capacitor is not required for stability, it is good analog design practice to connect a 0.1- μ F to 1- μ F, low ESR capacitor across the IN pin and GND pin of the regulator. This capacitor counteracts reactive input sources and improves transient response, noise rejection, and ripple rejection. A higher-value capacitor may be necessary if large, fast rise-time load transients are anticipated, or if the device is not located close to the power source. If source impedance is more than 2 Ω , a 0.1- μ F input capacitor may be necessary for stability.

8.2.2.2 Transient Response

As with any regulator, increasing the size of the output capacitor reduces overshoot and undershoot magnitude, but increases the duration of the transient response.

8.2.3 Application Curves

Figure 25. Load Transient Response

Figure 26. Line Transient Response

9 Power Supply Recommendations

Connect a low output impedance power supply directly to the IN pin of the TLV702-Q1. Inductive impedances between the input supply and the IN pin can create significant voltage excursions at the IN pin during start-up or load transient events.

9.1 Power Dissipation

The ability to remove heat from the die is different for each package type, presenting different considerations in the printed-circuit-board (PCB) layout. The PCB area around the device that is free of other components moves the heat from the device to the ambient air.

Refer to [Thermal Information](#) for thermal performance on the TLV702-Q1 evaluation module (EVM). The EVM is a two-layer board with two ounces of copper per side.

Power dissipation depends on input voltage and load conditions. Power dissipation (P_D) is equal to the product of the output current and the voltage drop across the output pass element, as shown in [Equation 1](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} \quad (1)$$

10 Layout

10.1 Layout Guidelines

Place the input and output capacitors as close to the device pins as possible. To improve ac performance such as PSRR, output noise, and transient response, design the board with separate ground planes for V_{IN} and V_{OUT} , with the ground plane connected only at the GND pin of the device. In addition, connect the ground connection for the output capacitor directly to the GND pin of the device. High-ESR capacitors may degrade PSRR performance.

10.1.1 Thermal Consideration

Thermal protection disables the output when the junction temperature rises to approximately 165°C, allowing the device to cool. When the junction temperature cools to approximately 145°C, the output circuitry is again enabled. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits the dissipation of the regulator, protecting it from damage as a result of overheating.

Any tendency to activate the thermal protection circuit indicates excessive power dissipation or an inadequate heatsink. For reliable operation, limit junction temperature to 125°C maximum.

To estimate the margin of safety in a complete design (including heatsink), increase the ambient temperature until the thermal protection is triggered; use worst-case loads and signal conditions.

The internal protection circuitry of the TLV702-Q1 is designed to protect against overload conditions but is not intended to replace proper heatsinking. Continuously running the TLV702-Q1 into thermal shutdown degrades device reliability.

Layout Guidelines (continued)

10.1.2 Package Mounting

Solder pad footprint recommendations for the TLV702-Q1 are available from the TI website at www.ti.com. The recommended layout examples for the DDC and DSE packages are shown in Figure 27 and Figure 28, respectively.

10.2 Layout Examples

Figure 27. Layout Example for the DDC and DBV Packages

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

EXAMPLE BOARD LAYOUT

DBV0005A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:15X

SOLDER MASK DETAILS

4214839/F 06/2021

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.
6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

DBV0005A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:15X

4214839/F 06/2021

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

DDC (R-PDSO-G5)

PLASTIC SMALL-OUTLINE

4204403-2/E 06/05

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion.
 - D. Falls within JEDEC MO-193 variation AB (5 pin).

DSE (S-PDSO-N6)

PLASTIC SMALL OUTLINE

4207810/A 03/06

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Small Outline No-Lead (SON) package configuration.
 - This package is lead-free.

4220552/A 04/2021

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.

EXAMPLE BOARD LAYOUT

DSE0006A

WSO - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

LAND PATTERN EXAMPLE
SCALE:40X

SOLDER MASK DETAILS

4220552/A 04/2021

NOTES: (continued)

3. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/sluea271).

EXAMPLE STENCIL DESIGN

DSE0006A

WSO - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:40X

NOTES: (continued)

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
