

# 适用于成本敏感型系统的 TLV900x 低功耗、RRIO、1MHz 运算放大器

## 1 特性

- 可扩展 CMOS 放大器，适用于低成本应用
- 轨至轨输入和输出
- 低输入失调电压：±0.4mV
- 单位带宽增益积：1MHz
- 低宽带噪声：27nV/√Hz
- 低输入偏置电流：5pA
- 低静态电流：60μA/通道
- 单位增益稳定
- 内置 RFI 和 EMI 滤波器
- 可在电源电压低至 1.8V 的情况下运行
- 由于具有电阻式开环输出阻抗，因此可在更高的容性负载下更轻松地实现稳定
- 工作温度范围：-40°C 至 125°C

## 2 应用

- 传感器信号调节
- 电源模块
- 有源滤波器
- 低侧电流检测
- 烟雾探测器
- 运动检测器
- 可穿戴设备
- 大型和小型家用电器
- EPOS
- 条形码扫描仪
- 个人电子产品
- HVAC：暖通空调
- 电机控制：交流感应

## 3 说明

TLV900x 系列包括单通道 (TLV9001)、双通道 (TLV9002)、和四通道 (TLV9004) 低电压 (1.8V 至 5.5V) 运算放大器，具有轨至轨输入和输出摆幅能力。这些运算放大器为空间受限、需要低压运行和高容性负载驱动的应用 (例如烟雾探测器、可穿戴电子产品和小型电器) 提供了具有成本效益的解决方案。TLV900x 系列的电容负载驱动器具有 500pF 的电容，而电阻式开环输出阻抗使其能够在更高的电容负载下更轻松地实现稳定。这些运算放大器专为低工作电压 (1.8V 至 5.5V) 而设计，性能规格类似于 TLV600x 器件。

TLV900x 系列稳健耐用的设计可简化电路设计。这些运算放大器具有单位增益稳定性，集成了 RFI 和 EMI 抑制滤波器，并且在过驱情况下不会出现相位反转。

TLV900x 器件具有关断模式 (TLV9001S、TLV9002S 和 TLV9004S)，允许放大器切换至典型电流消耗低于 1μA 的待机模式。

针对所有通道型号 (单通道、双通道和四通道) 提供微型封装 (如 SOT-553 和 WSON) 以及行业标准封装 (如 SOIC、MSOP、SOT-23 和 TSSOP 封装)。

器件信息

| 器件型号 <sup>(1)</sup> | 封装                         | 封装尺寸 (标称值)        |
|---------------------|----------------------------|-------------------|
| TLV9001             | SOT-23 (5)                 | 1.60mm × 2.90mm   |
|                     | SC70 (5)                   | 1.25mm × 2.00mm   |
|                     | SOT-553 (5) <sup>(2)</sup> | 1.65mm × 1.20mm   |
|                     | X2SON (5)                  | 0.80mm × 0.80mm   |
| TLV9001S            | SOT-23 (6)                 | 1.60mm × 2.90mm   |
|                     | SC70 (6)                   | 1.25mm × 2.00mm   |
| TLV9002             | SOIC (8)                   | 3.91mm × 4.90mm   |
|                     | WSON (8)                   | 2.00mm × 2.00mm   |
|                     | VSSOP (8)                  | 3.00mm × 3.00mm   |
|                     | SOT-23 (8)                 | 1.60mm × 2.90mm   |
|                     | TSSOP (8)                  | 3.00mm × 4.40mm   |
| TLV9002S            | VSSOP (10)                 | 3.00mm × 3.00mm   |
|                     | X2QFN (10)                 | 1.50mm × 2.00mm   |
|                     | DSBGA (9)                  | 1.00mm × 1.00mm   |
| TLV9004             | SOIC (14)                  | 8.65mm × 3.91mm   |
|                     | SOT-23 (14)                | 4.20 mm × 2.00 mm |
|                     | TSSOP (14)                 | 4.40mm × 5.00mm   |
|                     | WQFN (16)                  | 3.00mm × 3.00mm   |
|                     | X2QFN (14)                 | 2.00mm × 2.00mm   |
| TLV9004S            | WQFN (16)                  | 3.00mm × 3.00mm   |

(1) 如需了解所有可用封装，请参阅数据表末尾的可订购产品附录。

(2) 仅表示封装为预发布。

$$\frac{V_{OUT}}{V_{IN}} = \left(1 + \frac{R_F}{R_G}\right) \left(\frac{1}{1 + sR_1 C_1}\right)$$

单极低通滤波器

## 4 Revision History

注：以前版本的页码可能与当前版本的页码不同

| Changes from Revision Q (June 2021) to Revision R (November 2021)                                      | Page |
|--------------------------------------------------------------------------------------------------------|------|
| • 向 <i>器件信息</i> 表中添加了 SOT-23 (14) 封装.....                                                              | 1    |
| • Added SOT-23 DYY package to <i>Device Comparison Table</i> .....                                     | 6    |
| • Added SOT-23 (14) package to <i>Pin Configuration and Functions</i> section .....                    | 7    |
| • Added DYY (SOT-23) package thermal information to the <i>Thermal Information: TLV9004</i> table..... | 16   |

| Changes from Revision P (April 2021) to Revision Q (June 2021)                                             | Page |
|------------------------------------------------------------------------------------------------------------|------|
| • Changed supply voltage (V+) - (V-) MAX from 6 V to 7 V in the <i>Absolute Maximum Ratings</i> table..... | 14   |

| Changes from Revision O (April 2020) to Revision P (April 2021)                                          | Page |
|----------------------------------------------------------------------------------------------------------|------|
| • 更新了整个文档中的表格、图和交叉参考的编号格式.....                                                                           | 1    |
| • 向 <i>器件信息</i> 表中添加了 9 引脚 DSBGA 封装.....                                                                 | 1    |
| • Added 9-pin DSBGA package to <i>Device Comparison Table</i> .....                                      | 6    |
| • Added TLV9002S 9-pin DSBGA package to <i>Pin Configuration and Functions</i> section.....              | 7    |
| • Added TLV9002S 9-pin DSBGA package to <i>Thermal Information: TLV9002S</i> .....                       | 16   |
| • Deleted the <i>Related Links</i> section from the <i>Device and Documentation Support</i> section..... | 37   |

| Changes from Revision N (January 2020) to Revision O (April 2020)               | Page |
|---------------------------------------------------------------------------------|------|
| • 删除了 TLV9001S 上的“预发布”标识.....                                                   | 1    |
| • Deleted TLV9001SIDCK (6-pin SC70) package preview note .....                  | 7    |
| • Added DCK (SC70) data to the <i>Thermal Information: TLV9001S</i> table ..... | 15   |

|                                                                                                           |             |
|-----------------------------------------------------------------------------------------------------------|-------------|
| <b>Changes from Revision M (September 2019) to Revision N (January 2020)</b>                              | <b>Page</b> |
| • 向器件信息表中添加了 6 引脚 SC70 封装.....                                                                            | 1           |
| • Added 6-pin SC70 package to <i>Device Comparison Table</i> .....                                        | 6           |
| • Added TLV9001SIDCK (6-Pin SC70) package pinout.....                                                     | 7           |
| • Added TLV9001S 6-pin SC70 package to <i>Pin Configuration and Functions</i> section.....                | 7           |
| • Added 6-pin SC70 pinout to <i>Pin Functions: TLV9001S</i> .....                                         | 7           |
| • Added TLV9001S 6-pin SC70 package to <i>Thermal Information: TLV9001S</i> table.....                    | 15          |
| <b>Changes from Revision L (May 2019) to Revision M (September 2019)</b>                                  | <b>Page</b> |
| • Deleted preview notations for SOT-23-8 (DDF) package.....                                               | 6           |
| • Added link to <i>Shutdown</i> section in all $\overline{\text{SHDN}}$ pin function rows.....            | 7           |
| • Added <i>EMI Rejection</i> section to the <i>Feature Description</i> section.....                       | 27          |
| • Changed the <i>Shutdown</i> section to add more clarity regarding internal pull-up resistor.....        | 28          |
| <b>Changes from Revision K (March 2019) to Revision L (May 2019)</b>                                      | <b>Page</b> |
| • 向器件信息表中添加了 SOT-23 (8) 信息.....                                                                           | 1           |
| • Added SOT-23 DDF package to <i>Device Comparison Table</i> .....                                        | 6           |
| • Added SOT-23 (DDF) to <i>Pin Configuration and Functions</i> section.....                               | 7           |
| • Added DDF (SOT-23) <i>Thermal Information: TLV9002</i> table.....                                       | 15          |
| <b>Changes from Revision J (January 2019) to Revision K (March 2019)</b>                                  | <b>Page</b> |
| • Changed TLV9002S <i>ESD Ratings</i> heading to include all TLV9002S packages.....                       | 14          |
| • Deleted preview notation from TLV9002SIRUG in <i>Thermal Information</i> table.....                     | 16          |
| <b>Changes from Revision I (November 2018) to Revision J (January 2019)</b>                               | <b>Page</b> |
| • 删除了 TLV9002SIRUGR 的预发布符号.....                                                                           | 1           |
| • 将 TLV9004 WQFN(14) 封装标识符更改为 X2QFN(14) 封装标识符.....                                                        | 1           |
| • Added RUG package to <i>Device Comparison Table</i> .....                                               | 6           |
| • Added DGS package to <i>Device Comparison Table</i> .....                                               | 6           |
| • Added shutdown devices to <i>Device Comparison Table</i> .....                                          | 6           |
| • Changed TLV9001 DRL package pinout drawing.....                                                         | 7           |
| • Changed TLV9001 DRL package pin functions.....                                                          | 7           |
| • Deleted package preview note from TLV9002SIRUGR (X2QFN) pinout drawing.....                             | 7           |
| • Added TLV9004IRUC Thermal Information.....                                                              | 16          |
| • Changed legend of Closed-Loop Gain vs Frequency plot.....                                               | 20          |
| <b>Changes from Revision H (October 2018) to Revision I (November 2018)</b>                               | <b>Page</b> |
| • Added TLV9002SIDGS to <i>ESD Ratings</i> table.....                                                     | 14          |
| <b>Changes from Revision G (September 2018) to Revision H (October 2018)</b>                              | <b>Page</b> |
| • Changed From: TLV9001 DCK Package To: TLV9001T DCK Package.....                                         | 7           |
| <b>Changes from Revision F (August 2018) to Revision G (September 2018)</b>                               | <b>Page</b> |
| • Added <i>Device Comparison Table</i> .....                                                              | 6           |
| • Changed pin names for all devices and all packages.....                                                 | 7           |
| • Changed pin names and I/O designation on some TLV9001 pins .....                                        | 7           |
| • Changed the pin number for V+ in the SOIC, TSSOP column of the <i>Pin Functions: TLV9004</i> table..... | 7           |
| <b>Changes from Revision E (July 2018) to Revision F (August 2018)</b>                                    | <b>Page</b> |
| • 添加了“可扩展 CMOS 放大器，适用于低成本应用”特性.....                                                                       | 1           |

|                                                                                                      |   |
|------------------------------------------------------------------------------------------------------|---|
| • 删除了采用 TSSOP 封装的 TLV9002 和 TLV9004 器件上的“预发布”标识。.....                                                | 1 |
| • Added TLV9001U DBV (SOT-23) pinout drawing to <i>Pin Configuration and Functions</i> section ..... | 7 |
| • Added SOT-23 U Pinout to <i>Pin Functions</i> section .....                                        | 7 |

#### Changes from Revision D (June 2018) to Revision E (July 2018) Page

|                                                                                                   |    |
|---------------------------------------------------------------------------------------------------|----|
| • 更正了 说明 部分中的拼写错误.....                                                                            | 1  |
| • 向 器件信息 表中添加了 TLV9001 5 引脚 X2SON 封装.....                                                         | 1  |
| • 向 器件信息 表中添加了 TLV9001S 6 引脚 SOT-23 封装.....                                                       | 1  |
| • 向 器件信息 表中添加了 TLV9004 14 引脚和 16 引脚 WQFN 封装.....                                                  | 1  |
| • Added TLV9001 DPW (X2SON) pinout drawing to <i>Pin Configuration and Functions</i> section..... | 7  |
| • Added TLV9001S 6-pin SOT-23 package to <i>Pin Configuration and Functions</i> section.....      | 7  |
| • Added TLV9004 RTE pinout information to <i>Pin Configuration and Functions</i> section .....    | 7  |
| • Added DPW (X2SON) and DRL (SOT-553) packages to <i>Thermal Information: TLV9001</i> table.....  | 15 |
| • Added <i>Thermal Information: TLV9001S</i> table to <i>Specifications</i> section.....          | 15 |
| • Added RUG (X2QFN) package to <i>Thermal Information: TLV9002</i> table.....                     | 15 |
| • Added RTE (WQFN) and RUC (WQFN) packages to <i>Thermal Information: TLV9004</i> table.....      | 16 |

#### Changes from Revision C (May 2018) to Revision D (June 2018) Page

|                                                                                                                                                                     |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| • 向 说明 部分添加了关断文本.....                                                                                                                                               | 1  |
| • 向 器件信息 表中添加了 TLV9002S 和 TLV9004S 器件.....                                                                                                                          | 1  |
| • 向 器件信息 表中添加了 TLV9002S 10 引脚 X2QFN 封装.....                                                                                                                         | 1  |
| • Added TLV9002S DGS package pinout information to <i>Pin Configurations and Functions</i> section.....                                                             | 7  |
| • Added <i>Thermal Information: TLV9001</i> table to <i>Specifications</i> section.....                                                                             | 15 |
| • Added <i>Thermal Information: TLV9004</i> table to <i>Specifications</i> section.....                                                                             | 16 |
| • Added shutdown section to <i>Electrical Characteristics: V<sub>S</sub> (Total Supply Voltage) = (V<sub>+</sub>) - (V<sub>-</sub>) = 1.8 V to 5.5 V</i> table..... | 17 |
| • Added <i>Shutdown</i> section.....                                                                                                                                | 28 |

#### Changes from Revision B (March 2018) to Revision C (May 2018) Page

|                                                                                                                     |    |
|---------------------------------------------------------------------------------------------------------------------|----|
| • 向 器件信息 表中添加了 TLV9002 16 引脚 TSSOP 封装.....                                                                          | 1  |
| • 向 器件信息 表中添加了 TLV9002 10 引脚 X2QFN 封装.....                                                                          | 1  |
| • Added TLV9002S DGS package pinout drawing in <i>Pin Configurations and Functions</i> section.....                 | 7  |
| • Added TLV9004 pinout diagram and pin configuration table to <i>Pin Configuration and Functions</i> section .....  | 7  |
| • Added TLV9004S pinout diagram and pin configuration table to <i>Pin Configuration and Functions</i> section ..... | 7  |
| • Changed TLV9002 D (SOIC) junction-to-ambient thermal resistance value from 147.4°C/W to 207.9°C/W...              | 15 |
| • Changed TLV9002 D (SOIC) junction-to-case (top) thermal resistance from 94.3°C/W to 92.8°C/W.....                 | 15 |
| • Changed TLV9002 D (SOIC) junction-to-board thermal resistance from 89.5°C/W to 129.7°C/W.....                     | 15 |
| • Changed TLV9002 D (SOIC) junction-to-top characterization parameter from 47.3°C/W to 26°C/W.....                  | 15 |
| • Changed TLV9002 D (SOIC) junction-to-board characterization parameter from 89°C/W to 127.9°C/W.....               | 15 |
| • Added DGK (VSSOP) thermal information to <i>Thermal Information: TLV9002</i> table .....                          | 15 |
| • Added TLV9002 PW (TSSOP) thermal information to <i>Thermal Information: TLV9002</i> table.....                    | 15 |
| • Added PW (TSSOP) thermal information to <i>Thermal Information: TLV9002</i> table .....                           | 16 |

#### Changes from Revision A (December 2017) to Revision B (March 2018) Page

|                                                                                                                                                     |   |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|---|
| • 在 器件信息 表中，向 TLV9001 封装、TLV9004 封装和 TLV9002 8 引脚 VSSOP 封装添加了封装预发布说明.                                                                               | 1 |
| • Added package preview notes to TLV9001, TLV9004 and TLV9002 VSSOP package pinout drawings in <i>Pin Configuration and Functions</i> section ..... | 7 |
| • Deleted package preview note from TLV9002 DSG (WSN) pinout drawing in <i>Pin Configurations and Functions</i> section.....                        | 7 |
| • Deleted package preview note from TLV9002 RUG (X2QFN) pinout drawing in <i>Pin Configurations and Functions</i> section.....                      | 7 |

- Added DSG (WSO) package thermal information to the *Thermal Information: TLV9002* table..... [15](#)
- Deleted package preview note from DSG (WSO) package in *Thermal Information: TLV9002* table..... [15](#)
- Added D (SOIC) package thermal information to the *Thermal Information: TLV9004* table..... [16](#)

| <b>Changes from Revision * (October 2017) to Revision A (December 2017)</b> | <b>Page</b>       |
|-----------------------------------------------------------------------------|-------------------|
| • 将器件状态从“预告信息”更改为“量产数据/混合状态” .....                                          | <a href="#">1</a> |

## 7 Specifications

### 7.1 Absolute Maximum Ratings

over operating temperature range (unless otherwise noted)<sup>(1)</sup>

|                                     |                        |              | MIN          | MAX                 | UNIT |
|-------------------------------------|------------------------|--------------|--------------|---------------------|------|
| Supply voltage (V+) - (V - )        |                        |              |              | 7                   | V    |
| Signal input pins                   | Voltage <sup>(2)</sup> | Common-mode  | (V - ) - 0.5 | (V+) + 0.5          | V    |
|                                     |                        | Differential |              | (V+) - (V - ) + 0.2 | V    |
|                                     | Current <sup>(2)</sup> |              | - 10         | 10                  | mA   |
| Output short-circuit <sup>(3)</sup> |                        |              | Continuous   |                     |      |
| Operating, T <sub>A</sub>           |                        |              | - 55         | 150                 | °C   |
| Junction, T <sub>J</sub>            |                        |              |              | 150                 | °C   |
| Storage, T <sub>stg</sub>           |                        |              | - 65         | 150                 | °C   |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Input pins are diode-clamped to the power-supply rails. Input signals that may swing more than 0.5 V beyond the supply rails must be current limited to 10 mA or less.
- (3) Short-circuit to ground, one amplifier per package.

### 7.2 ESD Ratings

| TLV9002S PACKAGE   |                         |                                                                                | VALUE | UNIT |
|--------------------|-------------------------|--------------------------------------------------------------------------------|-------|------|
| V <sub>(ESD)</sub> | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>              | ±1500 | V    |
|                    |                         | Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup> | ±1500 |      |
| ALL OTHER PACKAGES |                         |                                                                                |       |      |
| V <sub>(ESD)</sub> | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>              | ±2000 | V    |
|                    |                         | Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup> | ±1000 |      |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions

over operating temperature range (unless otherwise noted)

|                |                       | MIN  | MAX | UNIT |
|----------------|-----------------------|------|-----|------|
| V <sub>S</sub> | Supply voltage        | 1.8  | 5.5 | V    |
| T <sub>A</sub> | Specified temperature | – 40 | 125 | °C   |

## 7.4 Thermal Information: TLV9001

| THERMAL METRIC <sup>(1)</sup> |                                              | TLV9001      |            |             |                              | UNIT |

## 8 Detailed Description

### 8.1 Overview

The TLV900x is a family of low-power, rail-to-rail input and output op amps. These devices operate from 1.8 V to 5.5 V, are unity-gain stable, and are designed for a wide range of general-purpose applications. The input common-mode voltage range includes both rails and allows the TLV900x family to be used in virtually any single-supply application. Rail-to-rail input and output swing significantly increases dynamic range, especially in low-supply applications, and makes them suitable for driving sampling analog-to-digital converters (ADCs).

### 8.2 Functional Block Diagram

## 8.3 Feature Description

### 8.3.1 Operating Voltage

The TLV900x family of op amps are for operation from 1.8 V to 5.5 V. In addition, many specifications such as input offset voltage, quiescent current, offset current, and short circuit current apply from  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . Parameters that vary significantly with operating voltages or temperature are shown in [节 7.11](#).

### 8.3.2 Rail-to-Rail Input

The input common-mode voltage range of the TLV900x family extends 100 mV beyond the supply rails for the full supply voltage range of 1.8 V to 5.5 V. This performance is achieved with a complementary input stage: an N-channel input differential pair in parallel with a P-channel differential pair, as shown in [节 8.2](#). The N-channel pair is active for input voltages close to the positive rail, typically  $(V+) - 1.4\text{ V}$  to 100 mV above the positive supply, whereas the P-channel pair is active for inputs from 100 mV below the negative supply to approximately  $(V+) - 1.4\text{ V}$ . There is a small transition region, typically  $(V+) - 1.2\text{ V}$  to  $(V+) - 1\text{ V}$ , in which both pairs are on. This 100-mV transition region can vary up to 100 mV with process variation. Thus, the transition region (with both stages on) can range from  $(V+) - 1.4\text{ V}$  to  $(V+) - 1.2\text{ V}$  on the low end, and up to  $(V+) - 1\text{ V}$  to  $(V+) - 0.8\text{ V}$  on the high end. Within this transition region, PSRR, CMRR, offset voltage, offset drift, and THD can degrade compared to device operation outside this region.

### 8.3.3 Rail-to-Rail Output

Designed as a low-power, low-voltage operational amplifier, the TLV900x family delivers a robust output drive capability. A class-AB output stage with common-source transistors achieves full rail-to-rail output swing capability. For resistive loads of  $10\text{ k}\Omega$ , the output swings to within 20 mV of either supply rail, regardless of the applied power-supply voltage. Different load conditions change the ability of the amplifier to swing close to the rails.

### 8.3.4 EMI Rejection

The TLV900x uses integrated electromagnetic interference (EMI) filtering to reduce the effects of EMI from sources such as wireless communications and densely-populated boards with a mix of analog signal chain and digital components. EMI immunity can be improved with circuit design techniques; the TLV900x benefits from these design improvements. Texas Instruments has developed the ability to accurately measure and quantify the immunity of an operational amplifier over a broad frequency spectrum extending from 10 MHz to 6 GHz. [图 8-1](#) shows the results of this testing on the TLV900x. [表 8-1](#) shows the EMIRR IN+ values for the TLV900x at particular frequencies commonly encountered in real-world applications. The [EMI Rejection Ratio of Operational Amplifiers](#) application report contains detailed information on the topic of EMIRR performance as it relates to op amps and is available for download from [www.ti.com](http://www.ti.com).

| 2.4 GHz   | 802.11b, 802.11g, 802.11n, Bluetooth®, mobile personal communications, industrial, scientific and medical (ISM) radio band, amateur radio and satellite, S-band (2 GHz to 4 GHz) | 78.0 dB   |
| 3.6 GHz   | Radiolocation, aero communication and navigation, satellite, mobile, S-band                                                                                                      | 88.8 dB   |

## 8.4 Overload Recovery

Overload recovery is defined as the time required for the operational amplifier output to recover from a saturated state to a linear state. The output devices of the operational amplifier enter a saturation region when the output voltage exceeds the rated operating voltage, because of the high input voltage or the high gain. After the device enters the saturation region, the charge carriers in the output devices require time to return to the linear state. After the charge carriers return to the linear state, the device begins to slew at the specified slew rate. Therefore, the propagation delay (in case of an overload condition) is the sum of the overload recovery time and the slew time. The overload recovery time for the TLV900x family is approximately 850 ns.

## 8.5 Shutdown

The TLV9001S, TLV9002S, and TLV9004S devices feature  $\overline{\text{SHDN}}$  pins that disable the op amp, placing it into a low-power standby mode. In this mode, the op amp typically consumes less than 1  $\mu\text{A}$ . The  $\overline{\text{SHDN}}$  pins are active low, meaning that shutdown mode is enabled when the input to the  $\overline{\text{SHDN}}$  pin is a valid logic low.

The  $\overline{\text{SHDN}}$  pins are referenced to the negative supply voltage of the op amp. The threshold of the shutdown feature lies around 620 mV (typical) and does not change with respect to the supply voltage. Hysteresis has been included in the switching threshold to ensure smooth switching characteristics. To ensure optimal shutdown behavior, the  $\overline{\text{SHDN}}$  pins should be driven with valid logic signals. A valid logic low is defined as a voltage between  $V_-$  and  $V_- + 0.2\text{ V}$ . A valid logic high is defined as a voltage between  $V_- + 1.2\text{ V}$  and  $V_+$ . The shutdown pin circuitry includes a pull-up resistor, which will inherently pull the voltage of the pin to the positive supply rail if not driven. Thus, to enable the amplifier, the  $\overline{\text{SHDN}}$  pins should either be left floating or driven to a valid logic high. To disable the amplifier, the  $\overline{\text{SHDN}}$  pins must be driven to a valid logic low. While we highly recommend that the shutdown pin be connected to a valid high or a low voltage or driven, we have included a pull-up resistor connected to VCC. The maximum voltage allowed at the  $\overline{\text{SHDN}}$  pins is  $(V_+) + 0.5\text{ V}$ . Exceeding this voltage level will damage the device.

The  $\overline{\text{SHDN}}$  pins are high-impedance CMOS inputs. Dual op amp versions are independently controlled and quad op amp versions are controlled in pairs with logic inputs. For battery-operated applications, this feature may be used to greatly reduce the average current and extend battery life. The enable time is 70  $\mu\text{s}$  for full shutdown of all channels; disable time is 4  $\mu\text{s}$ . When disabled, the output assumes a high-impedance state. This architecture allows the TLV9002S and TLV9004S to operate as a gated amplifier (or to have the device output multiplexed onto a common analog output bus). Shutdown time ( $t_{\text{OFF}}$ ) depends on loading conditions and increases as load resistance increases. To ensure shutdown (disable) within a specific shutdown time, the specified 10-k $\Omega$  load to midsupply ( $V_S / 2$ ) is required. If using the TLV9001S, TLV9002S, or TLV9004S without a load, the resulting turnoff time significantly increases.

## 8.6 Device Functional Modes

The TLV900x family has a single functional mode. The devices are powered on as long as the power-supply voltage is between 1.8 V ( $\pm 0.9\text{ V}$ ) and 5.5 V ( $\pm 2.75\text{ V}$ ).

## 9 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The TLV900x family of low-power, rail-to-rail input and output operational amplifiers is specifically designed for portable applications. The devices operate from 1.8 V to 5.5 V, are unity-gain stable, and are suitable for a wide range of general-purpose applications. The class AB output stage is capable of driving less than or equal to 10-k $\Omega$  loads connected to any point between V+ and V-. The input common-mode voltage range includes both rails, and allows the TLV900x devices to be used in any single-supply application.

### 9.2 Typical Application

#### 9.2.1 TLV900x Low-Side, Current Sensing Application

图 9-1 shows the TLV900x configured in a low-side current sensing application.

图 9-1. TLV900x in a Low-Side, Current-Sensing Application

### 9.2.1.1 Design Requirements

The design requirements for this design are:

- Load current: 0 A to 1 A
- Output voltage: 4.9 V
- Maximum shunt voltage: 100 mV

### 9.2.1.2 Detailed Design Procedure

The transfer function of the circuit in [图 9-1](#) is given in [方程式 1](#).

$$V_{OUT} = I_{LOAD} \times R_{SHUNT} \times \text{Gain} \quad (1)$$

The load current ( $I_{LOAD}$ ) produces a voltage drop across the shunt resistor ( $R_{SHUNT}$ ). The load current is set from 0 A to 1 A. To keep the shunt voltage below 100 mV at maximum load current, the largest shunt resistor is shown using [方程式 2](#).

$$R_{SHUNT} = \frac{V_{SHUNT\_MAX}}{I_{LOAD\_MAX}} = \frac{100\text{mV}}{1\text{A}} = 100\text{m}\Omega \quad (2)$$

Using [方程式 2](#),  $R_{SHUNT}$  is calculated to be 100 mΩ. The voltage drop produced by  $I_{LOAD}$  and  $R_{SHUNT}$  is amplified by the TLV900x to produce an output voltage of approximately 0 V to 4.9 V. The gain needed by the TLV900x to produce the necessary output voltage is calculated using [方程式 3](#).

$$\text{Gain} = \frac{(V_{OUT\_MAX} - V_{OUT\_MIN})}{(V_{IN\_MAX} - V_{IN\_MIN})} \quad (3)$$

Using [方程式 3](#), the required gain is calculated to be 49 V/V, which is set with resistors  $R_F$  and  $R_G$ . [方程式 4](#) sizes the resistors  $R_F$  and  $R_G$ , to set the gain of the TLV900x to 49 V/V.

$$\text{Gain} = 1 + \frac{(R_F)}{(R_G)} \quad (4)$$

Selecting  $R_F$  as 57.6 kΩ and  $R_G$  as 1.2 kΩ provides a combination that equals 49 V/V. [图 9-2](#) shows the measured transfer function of the circuit shown in [图 9-1](#). Notice that the gain is only a function of the feedback and gain resistors. This gain is adjusted by varying the ratio of the resistors and the actual resistors values are determined by the impedance levels that the designer wants to establish. The impedance level determines the current drain, the effect that stray capacitance has, and a few other behaviors. There is no optimal impedance selection that works for every system, you must choose an impedance that is ideal for your system parameters.

### 9.2.1.3 Application Curve

图 9-2. Low-Side, Current-Sense Transfer Function

### 9.2.2 Single-Supply Photodiode Amplifier

Photodiodes are used in many applications to convert light signals to electrical signals. The current through the photodiode is proportional to the photon energy absorbed, and is commonly in the range of a few hundred picoamps to a few tens of microamps. An amplifier in a transimpedance configuration is typically used to convert the low-level photodiode current to a voltage signal for processing in an MCU. The circuit shown in 图 9-3 is an example of a single-supply photodiode amplifier circuit using the TLV9002.

图 9-3. Single-Supply Photodiode Amplifier Circuit

### 9.2.2.1 Design Requirements

The design requirements for this design are:

- Supply voltage: 3.3 V
- Input: 0  $\mu$ A to 10  $\mu$ A
- Output: 0.1 V to 3.2 V
- Bandwidth: 50 kHz

### 9.2.2.2 Detailed Design Procedure

The transfer function between the output voltage ( $V_{OUT}$ ), the input current, ( $I_{IN}$ ) and the reference voltage ( $V_{REF}$ ) is defined in [方程式 5](#).

$$V_{OUT} = I_{IN} \times R_F + V_{REF} \quad (5)$$

Where:

$$V_{REF} = V_+ \times \left( \frac{R_1 \times R_2}{R_1 + R_2} \right) \quad (6)$$

Set  $V_{REF}$  to 100 mV to meet the minimum output voltage level by setting R1 and R2 to meet the required ratio calculated in [方程式 7](#).

$$\frac{V_{REF}}{V_+} = \frac{0.1 \text{ V}}{3.3 \text{ V}} = 0.0303 \quad (7)$$

The closest resistor ratio to meet this ratio sets R1 to 11.5 k $\Omega$  and R2 to 357  $\Omega$ .

The required feedback resistance can be calculated based on the input current and desired output voltage.

$$R_F = \frac{V_{OUT} - V_{REF}}{I_{IN}} = \frac{3.2 \text{ V} - 0.1 \text{ V}}{10 \text{ } \mu\text{A}} = 310 \frac{\text{kV}}{\text{A}} \approx 309 \text{ k}\Omega \quad (8)$$

Calculate the value for the feedback capacitor based on  $R_F$  and the desired – 3-dB bandwidth, ( $f_{-3dB}$ ) using [方程式 9](#).

$$C_F = \frac{1}{2 \times \pi \times R_F \times f_{-3dB}} = \frac{1}{2 \times \pi \times 309 \text{ k}\Omega \times 50 \text{ kHz}} = 10.3 \text{ pF} \approx 10 \text{ pF} \quad (9)$$

The minimum op amp bandwidth required for this application is based on the value of  $R_F$ ,  $C_F$ , and the capacitance on the INx – pin of the TLV9002 which is equal to the sum of the photodiode shunt capacitance, (CPD) the common-mode input capacitance, (CCM) and the differential input capacitance (CD) as [方程式 10](#) shows.

$$C_{IN} = C_{PD} + C_{CM} + C_D = 47 \text{ pF} + 5 \text{ pF} + 1 \text{ pF} = 53 \text{ pF} \quad (10)$$

The minimum op amp bandwidth is calculated in [方程式 11](#).

$$f_{-BGW} \geq \frac{C_{IN} + C_F}{2 \times \pi \times R_F \times C_F^2} \geq 324 \text{ kHz} \quad (11)$$

The 1-MHz bandwidth of the TLV900x meets the minimum bandwidth requirement and remains stable in this application configuration.

### 9.2.2.3 Application Curves

The measured current-to-voltage transfer function for the photodiode amplifier circuit is shown in 图 9-4. The measured performance of the photodiode amplifier circuit is shown in 图 9-5.

图 9-5. Photodiode Amplifier Circuit DC Results

## 10 Power Supply Recommendations

The TLV900x family is specified for operation from 1.8 V to 5.5 V ( $\pm 0.9$  V to  $\pm 2.75$  V); many specifications apply from  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . 节 7.11 presents parameters that may exhibit significant variance with regard to operating voltage or temperature.

### CAUTION

Supply voltages larger than 6 V may permanently damage the device; see 节 7.1.

Place 0.1- $\mu\text{F}$  bypass capacitors close to the power-supply pins to reduce coupling errors from noisy or high-impedance power supplies. For more detailed information on bypass capacitor placement, see 节 11.1.

### 10.1 Input and ESD Protection

The TLV900x family incorporates internal ESD protection circuits on all pins. For input and output pins, this protection primarily consists of current-steering diodes connected between the input and power-supply pins. These ESD protection diodes provide in-circuit, input overdrive protection, as long as the current is limited to 10 mA. 图 10-1 shows how a series input resistor can be added to the driven input to limit the input current. The added resistor contributes thermal noise at the amplifier input and the value must be kept to a minimum in noise-sensitive applications.

图 10-1. Input Current Protection

## 11 Layout

### 11.1 Layout Guidelines

For best operational performance of the device, use good printed circuit board (PCB) layout practices, including:

- Noise can propagate into analog circuitry through the power connections of the board and propagate to the power pins of the op amp itself. Bypass capacitors are used to reduce the coupled noise by providing a low-impedance path to ground.
  - Connect low-ESR, 0.1- $\mu$ F ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is adequate for single-supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces electromagnetic interference (EMI) noise pickup. Take care to physically separate digital and analog grounds, paying attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If these traces cannot be kept separate, crossing the sensitive trace at a 90 degree angle is much better as opposed to running the traces in parallel with the noisy trace.
- Place the external components as close to the device as possible, as shown in 图 11-2. Keeping  $R_F$  and  $R_G$  close to the inverting input minimizes parasitic capacitance.
- Keep the length of input traces as short as possible. Remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring may significantly reduce leakage currents from nearby traces that are at different potentials.
- Cleaning the PCB following board assembly is recommended for best performance.
- Any precision integrated circuit can experience performance shifts resulting from moisture ingress into the plastic package. Following any aqueous PCB cleaning process, baking the PCB assembly is recommended to remove moisture introduced into the device packaging during the cleaning process. A low-temperature, post-cleaning bake at 85°C for 30 minutes is sufficient for most circumstances.

### 12.2 接收文档更新通知

要接收文档更新通知，请导航至 [ti.com](https://www.ti.com) 上的器件产品文件夹。点击 [订阅更新](#) 进行注册，即可每周接收产品信息更改摘要。有关更改的详细信息，请查看任何已修订文档中包含的修订历史记录。

### 12.3 支持资源

[TI E2E™ 支持论坛](#) 是工程师的重要参考资料，可直接从专家获得快速、经过验证的解答和设计帮助。搜索现有解答或提出自己的问题可获得所需的快速设计帮助。

链接的内容由各个贡献者“按原样”提供。这些内容并不构成 TI 技术规范，并且不一定反映 TI 的观点；请参阅 TI 的《[使用条款](#)》。

### 12.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

Bluetooth® is a registered trademark of Bluetooth SIG, Inc.

所有商标均为其各自所有者的财产。

### 12.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

## DCK (R-PDSO-G5)

## PLASTIC SMALL-OUTLINE PACKAGE

4093553-3/G 01/2007

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - Falls within JEDEC MO-203 variation AA.

DCK (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

4222047/B 11/2015

## NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.

## DCK (R-PDSO-G6)

## PLASTIC SMALL-OUTLINE PACKAGE

4093553-4/G 01/2007

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - Falls within JEDEC MO-203 variation AB.

DCK (R-PDSO-G6)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

RUG (R-PQFP-N10)

PLASTIC QUAD FLATPACK

4208528-3/B 04/2008

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. QFN (Quad Flatpack No-Lead) package configuration.
  - D. This package complies to JEDEC MO-288 variation X2EFD.

RUG (R-PQFP-N10)

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
  - Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - Side aperture dimensions over-print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

## PACKAGE OUTLINE

**SOIC - 1.75 mm max height**

SMALL OUTLINE INTEGRATED CIRCUIT

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.
