LM431 Adjustable Precision Zener Shunt Regulator

1 Features

- Average Temperature Coefficient 50 ppm/°C
- Temperature Compensated for Operation Over the Full Temperature Range
- Programmable Output Voltage
- Fast Turnon Response
- Low-Output Noise
- Low-Dynamic Output Impedance
- Available in Space-Saving SOIC-8, SOT-23, and TO-92 Packages

2 Applications

- Adjustable Voltage or Current Linear and Switching Power Supplies
- Voltage Monitoring
- Current Source and Sink Circuits
- Circuits Requiring Precision References
- Zener Diode Replacements

3 Description

The LM431 is a 3-terminal adjustable shunt regulator with ensured temperature stability over the entire temperature range of operation. The output voltage may be set at any level greater than 2.5 V (V_{REF}) up to 36 V merely by selecting two external resistors that act as a voltage divided network. Due to the sharp turnon characteristics this device is an excellent replacement for many Zener diode applications.

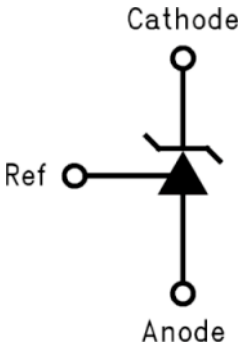

The LM431 is available in space-saving SOIC-8, SOT-23, and TO-92 packages.

Device Information(1)

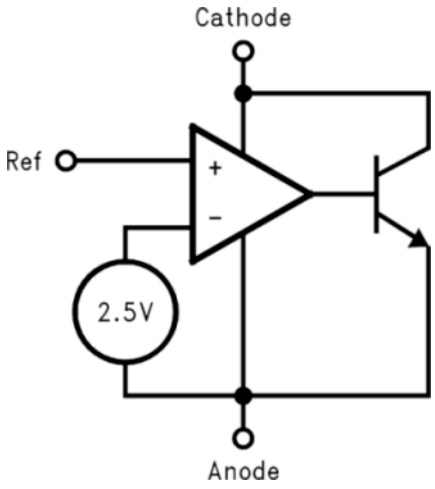

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LM431	SOIC (8)	4.90 mm × 3.91 mm
	SOT-23 (3)	2.92 mm × 1.30 mm
	TO-92 (3)	4.30 mm × 4.30 mm

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)(2)

		MIN	MAX	UNIT
Cathode voltage		37		V
Reference voltage		–0.5		V
Continuous cathode current		–10	150	mA
Reference input current		10		mA
Internal power dissipation(3)(4)	TO-92 package	0.78		W
	SOIC package	0.81		W
	SOT-23 package	0.28		W
Operating temperature	Industrial (LM431xI)	–40	85	°C
	Commercial (LM431xC)	0	70	°C
Storage temperature		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) If Military/Aerospace specified devices are required, please contact the TI Sales Office/ Distributors for availability and specifications.
(3) $T_{J\ Max}$ = 150°C.
(4) Ratings apply to ambient temperature at 25°C. Above this temperature, derate the TO-92 at 6.2 mW/°C, the SOIC at 6.5 mW/°C, the SOT-23 at 2.2 mW/°C.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2500	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	MAX	UNIT
Cathode voltage	V_{REF}	37	V
Cathode current	1	100	mA

6.4 Thermal Information

THERMAL METRIC(1)		LM431			UNIT
		D (SOIC)	DBZ (SOT-23)	LP (TO-92)	
		8 PINS	3 PINS	3 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	126.9	267.7	162.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	72.2	138.3	85.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	67.5	61	—	°C/W
ψ_{JT}	Junction-to-top characterization parameter	21.1	21.5	29.4	°C/W
ψ_{JB}	Junction-to-board characterization parameter	67	60.1	141.5	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	—	—	—	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, SPRA953.

6.5 Electrical Characteristics

T_A = 25°C unless otherwise specified

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_{REF}	Reference voltage	$V_Z = V_{REF}$, I_I = 10 mA LM431A (Figure 6)		2.44	2.495	2.55	V
		$V_Z = V_{REF}$, I_I = 10 mA LM431B (Figure 6)		2.47	2.495	2.52	
		$V_Z = V_{REF}$, I_I = 10 mA LM431C (Figure 6)		2.485	2.5	2.51	
V_{DEV}	Deviation of reference input voltage overtemperature(1)	$V_Z = V_{REF}$, I_I = 10 mA, T_A = full range (Figure 6)			8	17	mV
$\Delta V_{REF}/\Delta V_Z$	Ratio of the change in reference voltage to the change in cathode voltage	I_Z = 10 mA (Figure 7)	V_Z from V_{REF} to 10 V		−1.4	−2.7	mV/V
			V_Z from 10 V to 36 V		−1	−2	
I_{REF}	Reference input current	R_1 = 10 kΩ, R_2 = ∞, I_I = 10 mA (Figure 7)			2	4	µA
$\propto I_{REF}$	Deviation of reference input current overtemperature	R_1 = 10 kΩ, R_2 = ∞, I_I = 10 mA, T_A = full range (Figure 7)			0.4	1.2	µA
$I_{Z(MIN)}$	Minimum cathode current for regulation	$V_Z = V_{REF}$(Figure 6)			0.4	1	mA
$I_{Z(OFF)}$	OFF-state current	V_Z = 36 V, V_{REF} = 0 V (Figure 8)			0.3	1	µA

(1) Deviation of reference input voltage, V_{DEV}, is defined as the maximum variation of the reference input voltage over the full temperature range.

The average temperature coefficient of the reference input voltage, $\propto V_{REF}$, is defined as:

$$\propto V_{REF} \frac{ppm}{°C} = \frac{\pm\left[\frac{V_{Max} - V_{Min}}{V_{REF}\ (at\ 25°C)}\right]10^6}{T_2 - T_1} = \frac{\pm\left[\frac{V_{DEV}}{V_{REF}\ (at\ 25°C)}\right]10^6}{T_2 - T_1}$$

Where:
$T_2 – T_1$ = full temperature change (0–70°C).
V_{REF} can be positive or negative depending on whether the slope is positive or negative.
Example: V_{DEV} = 8 mV, V_{REF} = 2495 mV, $T_2 – T_1$ = 70°C, slope is positive.

$$\propto V_{REF} = \frac{\left[\frac{8.0\ mV}{2495\ mV}\right]10^6}{70°C} = +46\ ppm/°C$$

Electrical Characteristics (continued)

T_A = 25°C unless otherwise specified

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
r_Z	Dynamic output impedance(2)	$V_Z = V_{REF}$, LM431A, Frequency = 0 Hz (Figure 6)			0.75	Ω
		$V_Z = V_{REF}$, LM431B, LM431C Frequency = 0 Hz (Figure 6)			0.5	

(2) The dynamic output impedance, r_Z, is defined as:

$$r_Z = \frac{\Delta V_Z}{\Delta I_Z}$$

When the device is programmed with two external resistors, R1 and R2, (see Figure 7), the dynamic output impedance of the overall circuit, r_Z, is defined as:

$$r_Z = \frac{\Delta V_Z}{\Delta I_Z} \cong \left[r_Z \left(1 + \frac{R1}{R2} \right) \right]$$

8 Detailed Description

8.1 Overview

The LM431 is an adjustable precision shunt voltage regulator with ensured temperature stability over the entire temperature range. The part has three different packages available to meet small footprint requirements, and is available in three different tolerance grades.

8.2 Functional Block Diagram

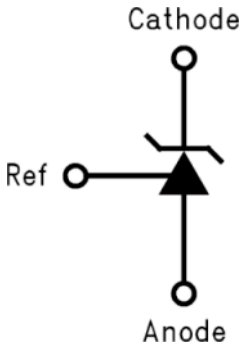

Figure 9. LM431 Symbol

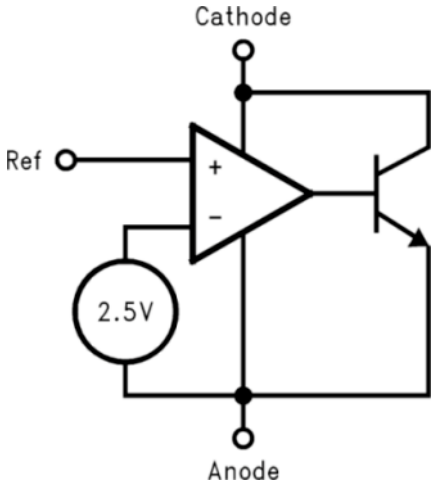

Figure 10. LM431 Block Diagram

8.3 Feature Description

The LM431 is a precision Zener diode. The part requires a small quiescent current for regulation, and regulates the output voltage by shunting more or less current to ground, depending on input voltage and load. The only external component requirement is a resistor between the cathode and the input voltage to set the input current. An external capacitor can be used on the input or output, but is not required.

Copyright © 2000–2016, Texas Instruments Incorporated

Feature Description (continued)

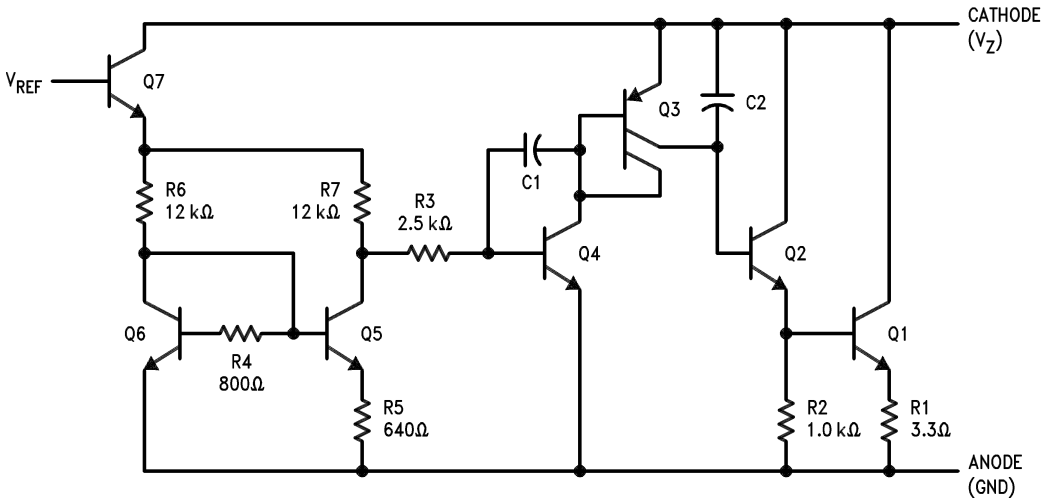

Figure 11. Equivalent Circuit

8.4 Device Functional Modes

The LM431 is most commonly operated in closed-loop mode, where the reference node is tied to the output voltage via a resistor divider. The output voltage remains in regulation as long as I_z is between 1 mA and 100 mA. The part can also be used in open-loop mode to act as a comparator, driving the feedback node from another voltage source.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers must validate and test their design implementation to confirm system functionality.

9.1 Application Information

The LM431 is an adjustable precision shunt voltage regulator with ensured temperature stability over the entire temperature range. For space critical applications, the LM431 is available in space saving SOIC-8, SOT-23 and TO-92 packages. The minimum operating current is 1 mA while the maximum operating current is 100 mA.

The typical thermal hysteresis specification is defined as the change in 25°C voltage measured after thermal cycling. The device is thermal cycled to temperature 0°C and then measured at 25°C. Next the device is thermal cycled to temperature 70°C and again measured at 25°C. The resulting VOUT delta shift between the 25°C measurements is thermal hysteresis. Thermal hysteresis is common in precision references and is induced by thermal-mechanical package stress. Changes in environmental storage temperature, operating temperature and board mounting temperature are all factors that can contribute to thermal hysteresis.

In a conventional shunt regulator application (Figure 12), an external series resistor (R_S) is connected between the supply voltage and the LM431 cathode pin. R_S determines the current that flows through the load (I_{LOAD}) and the LM431 (I_Z). Since load current and supply voltage may vary, R_S must be small enough to supply at least the minimum acceptable I_Z to the LM431 even when the supply voltage is at its minimum and the load current is at its maximum value. When the supply voltage is at its maximum and I_{LOAD} is at its minimum, R_S must be large enough so that the current flowing through the LM431 is less than 100 mA.

R_S must be selected based on the supply voltage, (V+), the desired load and operating current, (I_{LOAD} and I_Z), and the output voltage, see Equation 1.

$$R_S = \frac{V_+ - V_O}{I_{LOAD} + I_Z} \quad (1)$$

The LM431 output voltage can be adjusted to any value in the range of 2.5 V through 37 V. It is a function of the internal reference voltage (VREF) and the ratio of the external feedback resistors as shown in Figure 12. The output voltage is found using Equation 2.

$$V_O = V_{REF} * (1 + R_1/R_2) \quad (2)$$

where

- V_O is the output voltage (also, cathode voltage, V_Z). The actual value of the internal V_{REF} is a function of V_Z.

The corrected V_{REF} is determined by Equation 3:

$$V_{REF} = \Delta V_Z * (\Delta V_{REF}/\Delta V_Z) + V_Y \quad (3)$$

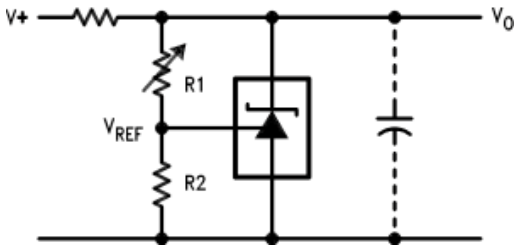

where

- V_Y = 2.5 V and $\Delta V_Z = (V_Z - V_Y)$
- $\Delta V_{REF}/\Delta V_Z$ is found in the *Electrical Characteristics* and is typically −1.4 mV/V for V_Z raging from V_{REF} to 10 V and –1 mV/V for V_Z raging from 10 V to 36 V.

Copyright © 2000–2016, Texas Instruments Incorporated

9.2 Typical Applications

9.2.1 Shunt Regulator

$$V_O \approx \left(1 + \frac{R1}{R2}\right) V_{REF}$$

Figure 12. Shunt Regulator

9.2.1.1 Design Requirements

Design a shunt regulator with the following requirements:

- $V_+ > V_O$
- $V_O = 5$ V

Select R_S (a resistor between V_+ and V_O) such that: 1 mA < I_Z < 100 mA

9.2.1.2 Detailed Design Procedure

The resistor R_S must be selected such that current I_Z remains in the operational region of the part for the entire V_+ range and load current range. The two extremes to consider are V_+ at its minimum, and the load at its maximum, where R_S must be small enough for I_Z to remain above 1 mA. The other extreme is V_+ at its maximum, and the load at its minimum, where R_S must be large enough to maintain I_Z < 100 mA. If unsure, try using 1 mA ≤ I_R ≤ 10 mA as a starting point; just remember the value of I_Z varies with input voltage and load.

Use Equation 4 and Equation 5 to set R_S between R_{S_MIN} and R_{S_MAX}.

$$R_{S_MIN} = \frac{V_{+_MAX} - V_O}{I_{LOAD_MIN} + I_{Z_MAX}} \quad (4)$$

$$R_{S_MAX} = \frac{V_{+_MIN} - V_O}{I_{LOAD_MAX} + I_{Z_MIN}} \quad (5)$$

Set feedback resistors R_1 and R_2 for a resistor divider based on Equation 2 and reproduced in Equation 6

$$V_O = V_{REF} * (1 + R_1/R_2) \quad (6)$$

So, for a 5-V output voltage, V_O, and V_{REF} of 2.5 V, simple calculation yields $R_1/R_2 = 1$. Based on this, select R_1 = 1 kΩ and R2 = 1 kΩ.

10 Power Supply Recommendations

While a bypass capacitor is not required on the input voltage line, TI recommends reducing noise on the input which could affect the output. TI recommends a 0.1-µF ceramic capacitor or larger.

11 Layout

11.1 Layout Guidelines

Place external components as close to the device as possible. Place R_S close to the cathode, as well as the input bypass capacitor, if used. Keep feedback resistor close the device whenever possible.

11.2 Layout Example

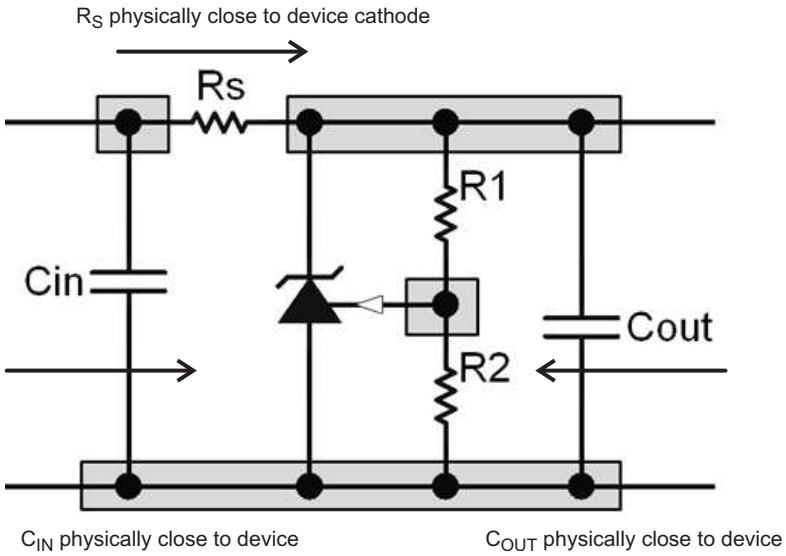

Figure 26. LM431 Layout Recommendation

12 Device and Documentation Support

12.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community ***TI's Engineer-to-Engineer (E2E) Community.*** Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support ***TI's Design Support*** Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.2 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.4 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. (1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

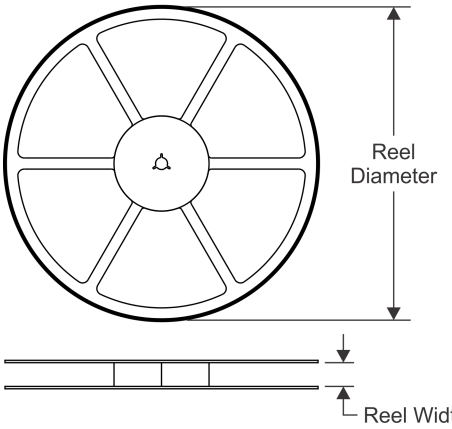

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

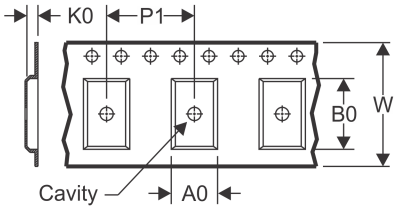

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

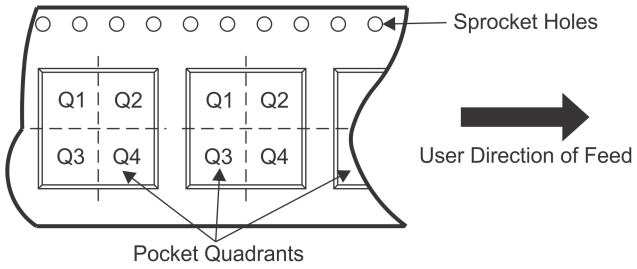

TAPE DIMENSIONS

A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

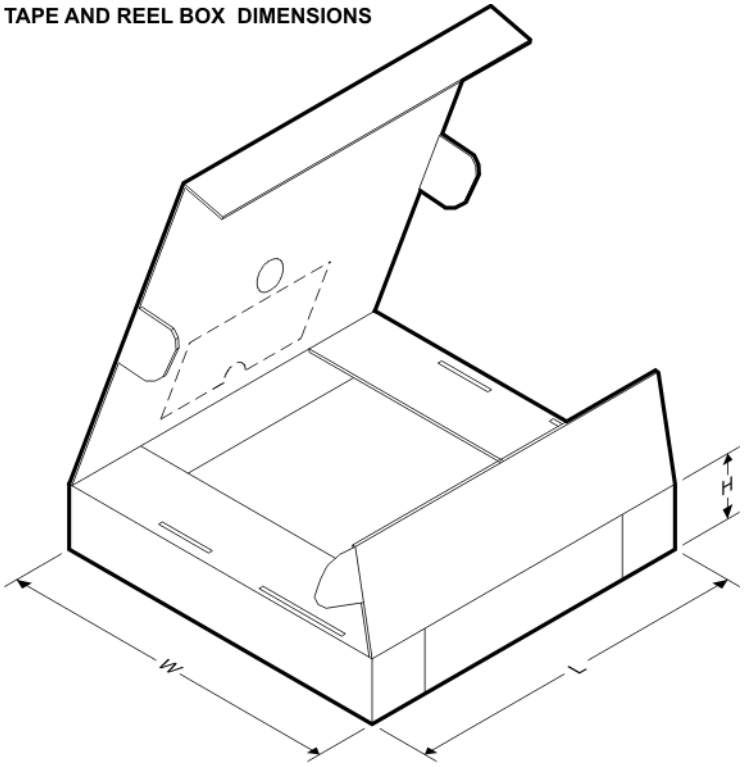

*All dimensions are nominal

Refer to the product data sheet for package details.

PACKAGE OUTLINE

DBZ0003A

SOT-23 - 1.12 mm max height

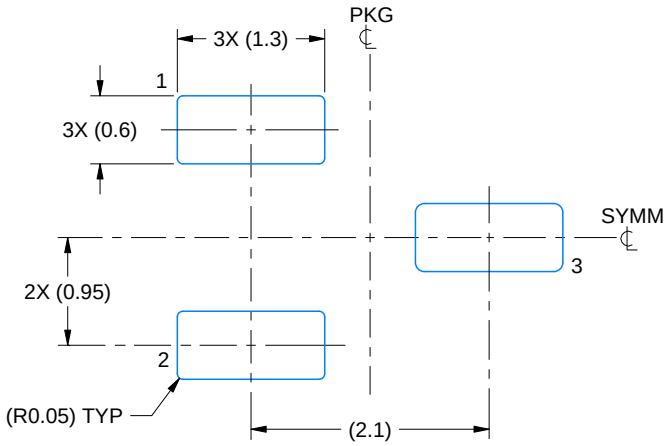

SMALL OUTLINE TRANSISTOR

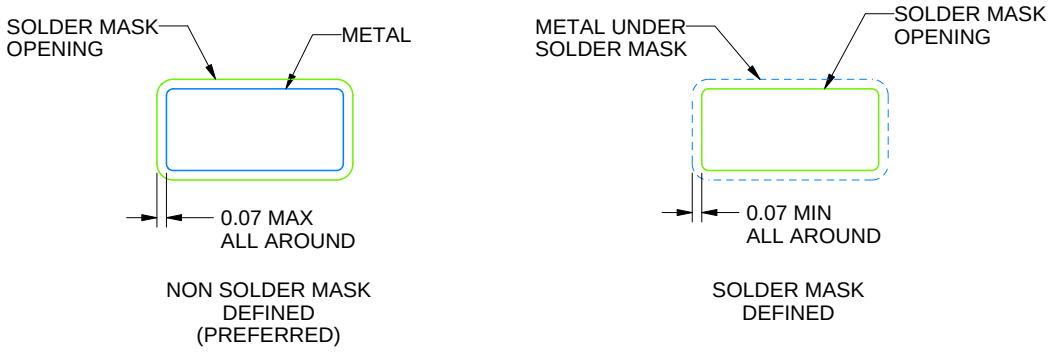

4214838/C 04/2017

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.

LAND PATTERN EXAMPLE
SCALE:15X

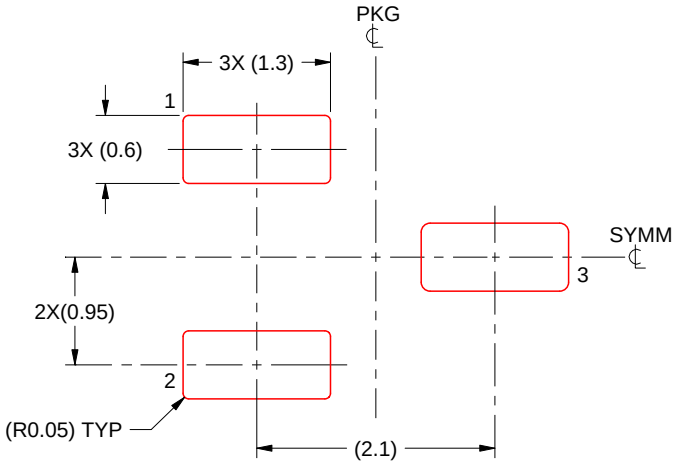

SOLDER MASK DETAILS

4214838/C 04/2017

NOTES: (continued)

4. Publication IPC-7351 may have alternate designs.
5. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOLDER PASTE EXAMPLE
BASED ON 0.125 THICK STENCIL
SCALE:15X

4214838/C 04/2017

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
7. Board assembly site may have different recommendations for stencil design.

GENERIC PACKAGE VIEW

LP 3 TO-92 - 5.34 mm max height

TO-92 - 5.34 mm max height

TO-92

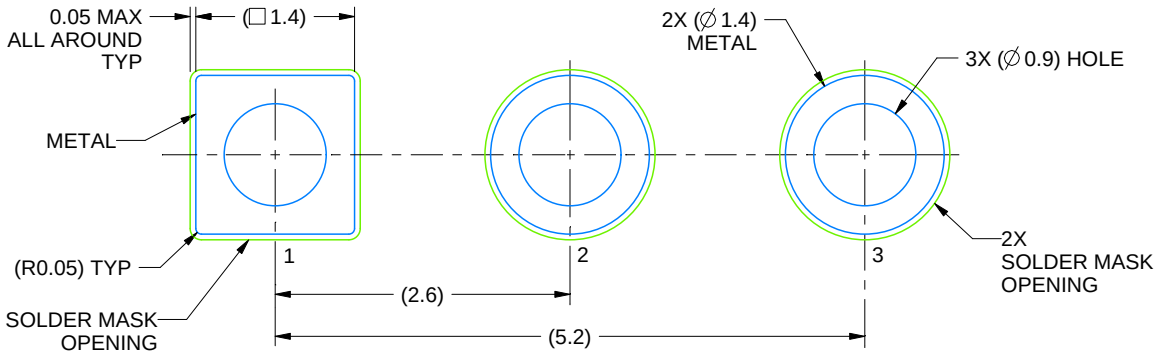

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Lead dimensions are not controlled within this area.
4. Reference JEDEC TO-226, variation AA.
5. Shipping method:
   a. Straight lead option available in bulk pack only.
   b. Formed lead option available in tape and reel or ammo pack.
   c. Specific products can be offered in limited combinations of shipping medium and lead options.
   d. Consult product folder for more information on available options.
