

## LM4040 Precision Micropower Shunt Voltage Reference

### 1 Features

- Fixed Output Voltages of 2.048 V, 2.5 V, 3 V, 4.096 V, 5 V, 8.192 V, and 10 V
- Tight Output Tolerances and Low Temperature Coefficient
  - Max 0.1%, 100 ppm/°C – A Grade
  - Max 0.2%, 100 ppm/°C – B Grade
  - Max 0.5%, 100 ppm/°C – C Grade
  - Max 1.0%, 150 ppm/°C – D Grade
- Low Output Noise: 35  $\mu\text{V}_{\text{RMS}}$  Typ
- Wide Operating Current Range: 45  $\mu\text{A}$  Typ to 15 mA
- Stable With All Capacitive Loads; No Output Capacitor Required
- Available in Extended Temperature Range: –40°C to 125°C

### 2 Applications

- Data-Acquisition Systems
- Power Supplies and Power-Supply Monitors
- Instrumentation and Test Equipment
- Process Controls
- Precision Audio
- Automotive Electronics
- Energy Management
- Battery-Powered Equipment

### 3 Description

The LM4040 series of shunt voltage references are versatile, easy-to-use references that cater to a vast array of applications. The 2-pin fixed-output device requires no external capacitors for operation and is stable with all capacitive loads. Additionally, the reference offers low dynamic impedance, low noise, and low temperature coefficient to ensure a stable output voltage over a wide range of operating currents and temperatures. The LM4040 uses fuse and Zener-zap reverse breakdown voltage trim during wafer sort to offer four output voltage tolerances, ranging from 0.1% (max) for the A grade to 1% (max) for the D grade. Thus, a great deal of flexibility is offered to designers in choosing the best cost-to-performance ratio for their applications.

Packaged in space-saving SC-70 and SOT-23-3 packages and requiring a minimum current of 45  $\mu\text{A}$  (typ), the LM4040 also is ideal for portable applications. The LM4040xl is characterized for operation over an ambient temperature range of –40°C to 85°C. The LM4040xQ is characterized for operation over an ambient temperature range of –40°C to 125°C.

**Device Information<sup>(1)</sup>**

| PART NUMBER | PACKAGE (PIN) | BODY SIZE (NOM)   |
|-------------|---------------|-------------------|
| LM4040      | SOT-23 (3)    | 2.92 mm × 1.30 mm |
|             | SC70 (6)      | 2.00 mm × 1.25 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 4 Revision History

| Changes from Revision M (January 2015) to Revision N                                                         | Page     |
|--------------------------------------------------------------------------------------------------------------|----------|
| • Changed generic part number to include shorter list (LM4040A/B/C/D) .....                                  | <b>1</b> |
| • Added Average temperature coefficient of reverse breakdown voltage footnote to all electrical tables ..... | <b>6</b> |
| • Changed Thermal hysteresis in electrical characteristics tables .....                                      | <b>6</b> |

| Changes from Revision L (January 2009) to Revision M                                                                                                                                                                                                                                                                                                                                                                                                                      | Page     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| • Added <i>Applications</i> , <i>Device Information</i> table, <i>Pin Functions</i> table, <i>ESD Ratings</i> table, <i>Thermal Information</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section. .... | <b>1</b> |
| • Deleted <i>Ordering Information</i> table. ....                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>1</b> |

## 5 Pin Configuration and Functions

DBZ (SOT-23) PACKAGE  
(TOP VIEW)

\* Pin 3 is attached to substrate and must be connected to ANODE or left open.

DCK (SC-70) PACKAGE  
(TOP VIEW)

NC – No internal connection

### Pin Functions

| PIN     |     |         | TYPE | DESCRIPTION                              |
|---------|-----|---------|------|------------------------------------------|
| NAME    | DBZ | DCK     |      |                                          |
| CATHODE | 1   | 3       | I/O  | Shunt Current/Voltage input              |
| ANODE   | 2   | 1       | O    | Common pin, normally connected to ground |
| NC      | —   | 2, 4, 5 | I    | No Internal Connection                   |
| *       | 3   | —       | I    | Substrate Connection                     |

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|           |                                        | MIN | MAX | UNIT |
|-----------|----------------------------------------|-----|-----|------|
| $I_Z$     | Continuous cathode current             | –10 | 25  | mA   |
| $T_J$     | Operating virtual junction temperature |     | 150 | °C   |
| $T_{stg}$ | Storage temperature range              | –65 | 150 | °C   |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

|             |                         |                                                                                          | VALUE | UNIT |
|-------------|-------------------------|------------------------------------------------------------------------------------------|-------|------|
| $V_{(ESD)}$ | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>              | ±2000 | V    |
|             |                         | Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup> | ±1000 |      |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

|       |                      |            | MIN            | MAX | UNIT |
|-------|----------------------|------------|----------------|-----|------|
| $I_Z$ | Cathode current      |            | <sup>(1)</sup> | 15  | mA   |
| $T_A$ | Free-air temperature | LM4040xxxi | –40            | 85  | °C   |
|       |                      | LM4040xxxQ | –40            | 125 |      |

- (1) See parametric tables

### 6.4 Thermal Information

| THERMAL METRIC <sup>(1)</sup> |                                        | LM4040 |        | UNIT |
|-------------------------------|----------------------------------------|--------|--------|------|
|                               |                                        | DBZ    | DCK    |      |
|                               |                                        | 3 PINS | 5 PINS |      |
| $R_{\theta JA}$               | Junction-to-ambient thermal resistance | 206    | 252    | °C/W |

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.

## 6.5 LM4040A20I, LM4040B20I Electrical Characteristics

at industrial temperature range, full-range  $T_A = -40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$  (unless otherwise noted)

| PARAMETER                       |                                                                             | TEST CONDITIONS                                                         | T <sub>A</sub> | LM4040A20I |     |     | LM4040B20I |     |     | UNIT              |

|                                 | Long-term stability of reverse breakdown voltage                            | t = 1000 h, T <sub>A</sub> = 25°C ± 0.1°C, I <sub>Z</sub> = 100 μA      |                | 120        |     |     | 120        |     |     | ppm               |
| V <sub>HYST</sub>               | Thermal hysteresis <sup>(2)</sup>                                           | ΔT <sub>A</sub> = −40°C to 125°C                                        |                | 0.08%      |     |     | 0.08%      |     |     | —                 |

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

## 6.6 LM4040C20I, LM4040D20I Electrical Characteristics

at industrial temperature range, full-range  $T_A = -40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$  (unless otherwise noted)

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

| V <sub>HYST</sub>               | Thermal hysteresis <sup>(2)</sup>                                           | ΔT <sub>A</sub> = −40°C to 125°C                                        |                | 0.08%      |     |     | 0.08%      |     |     | —                 |

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

## 6.10 LM4040C25Q, LM4040D25Q Electrical Characteristics

at extended temperature range, full-range  $T_A = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  (unless otherwise noted)

| V <sub>HYST</sub>               | Thermal hysteresis <sup>(2)</sup>                                           | ΔT <sub>A</sub> = −40°C to 125°C                                        |                | 0.08%      |     |     | 0.08%      |     |     | —                 |

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\max \Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\max \Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\max \Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\max \Delta T = 100^{\circ}\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:  
C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

## 6.13 LM4040C30Q, LM4040D30Q Electrical Characteristics

at extended temperature range, full-range  $T_A = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  (unless otherwise noted)

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\max \Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\max \Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\max \Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\max \Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

## 6.16 LM4040A50I, LM4040B50I Electrical Characteristics

at industrial temperature range, full-range  $T_A = -40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$  (unless otherwise noted)

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\max \Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\max \Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\max \Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\max \Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

## 6.19 LM4040A82I, LM4040B82I Electrical Characteristics

at industrial temperature range, full-range  $T_A = -40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$  (unless otherwise noted)

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\max \Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\max \Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\max \Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\max \Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

## 6.22 LM4040C10I, LM4040D10I Electrical Characteristics

at industrial temperature range, full-range  $T_A = -40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$  (unless otherwise noted)

| V <sub>HYST</sub>               | Thermal hysteresis <sup>(2)</sup>                                           | ΔT <sub>A</sub> = −40°C to 125°C                                        |                | 0.08%      |     |     | 0.08%      |     |     | 0.08%  | —                 |   |

- (1) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^{\circ}\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^{\circ}\text{C}$  is shown below:
- A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 65^{\circ}\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^{\circ}\text{C}$  is shown below:
- C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^{\circ}\text{C} \times 100^{\circ}\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040 has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- (2) Thermal hysteresis is defined as the difference in voltage measured at  $25^{\circ}\text{C}$  after cycling to temperature  $-40^{\circ}\text{C}$  and the  $25^{\circ}\text{C}$  measurement after cycling to temperature  $125^{\circ}\text{C}$ .

## 7 Detailed Description

### 7.1 Overview

The LM4040 is a precision micro-power curvature-corrected bandgap shunt voltage reference. The LM4040 has been designed for stable operation without the need of an external capacitor connected between the “+” pin and the “–” pin. If, however, a bypass capacitor is used, the LM4040 remains stable.

LM4040 offers several fixed reverse breakdown voltages: 2.048 V, 2.500 V, 3.000 V, 4.096 V, 5.000 V, 6.000, 8.192 V, and 10.000 V. The minimum operating current increases from 60  $\mu$ A for the LM4040-N-2.048 and LM4040-N-2.5 to 100  $\mu$ A for the 10.0-V LM4040. All versions have a maximum operating current of 15 mA.

Each reverse voltage options can be purchased with initial tolerances (at 25°C) of 0.1%, 0.2%, 0.5% and 1.0%. These reference options are denoted by A (0.1%), B (0.2%), C (0.5%) and D for (1.0%).

The LM4040xxxI devices are characterized for operation from –40°C to 85°C, and the LM4040xxxQ devices are characterized for operation from –40°C to 125°C.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

A temperature compensated band gap voltage reference controls high gain amplifier and shunt pass element to maintain a nearly constant voltage between cathode and anode. Regulation occurs after a minimum current is provided to power the voltage divider and amplifier. Internal frequency compensation provides a stable loop for all capacitor loads. Floating shunt design is useful for both positive and negative regulation applications.

### 7.4 Device Functional Modes

#### 7.4.1 Shunt Reference

LM4040 will operate in one mode, which is as a fixed voltage reference that cannot be adjusted. LM4040 does offer various Reverse Voltage options that have unique electrical characteristics detailed in the [Specifications](#) section.

In order for a proper Reverse Voltage to be developed, current must be sourced into the cathode of LM4040. The minimum current needed for proper regulation is denoted in the [Specifications](#) section as  $I_{Z,min}$ .

## 8 Applications and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

LM4040 is a well known industry standard device used in several applications and end equipment where a reference is required. Below describes this device being used in a data acquisition system. Analog to Digital conversion systems are the most common applications to use LM4040 due to its low reference tolerance which allows high precision in these systems.

### 8.2 Typical Applications

Figure 6. Data-Acquisition Circuit With LM4040x-41

#### 8.2.1 Design Requirements

For this design example, use the parameters listed in [Table 1](#) as the input parameters.

Table 1. Design Parameters

| DESIGN PARAMETER           | EXAMPLE VALUE |
|----------------------------|---------------|
| ADC FSR (Full Scale Range) | 4.096         |
| ADC Resolution             | 12 Bits       |
| Supply Voltage             | 5 V           |
| Cathode Current (Ik)       | 100 $\mu$ A   |

## 8.2.2 Detailed Design Procedure

When using LM4040 as a comparator with reference, determine the following:

- Input voltage range
- Reference voltage accuracy
- Output logic input high and low level thresholds
- Current source resistance

### 8.2.2.1 LM4040 Voltage and Accuracy Choice

When using LM4040 as a reference for an ADC, the ADC's FSR (Full Scale Range), Resolution and LSB must be determined. LSB can be determined by:

$$\text{LSB} = \text{FSR} / (2^N - 1)$$

With N being the resolution or Number of Bits. FSR and Resolution can be determined by the ADC's datasheet.

Vref can be determined by:

$$\text{Vref} = \text{FSR} + \text{LSB}$$

Though modern data converters use calibration techniques to compensate for any error introduced by a Vref's inaccuracy, it is best to use the highest accuracy available. This is due to errors in the calibration method that may allow some non-linearities introduced by the Vref's initial accuracy.

A good example is the LM4040x-41 that is designed to be a cost-effective voltage reference as required in 12-bit data-acquisition systems. For 12-bit systems operating from 5-V supplies (see Figure 6), the LM4040A-41 (4.096 V, 0.01%) only introduces 4 LSBs (4mV) of possible error in a system that consists of 4096 LSBs.

### 8.2.2.2 Cathode and Load Currents

In a typical shunt-regulator configuration (see Figure 7), an external resistor,  $R_S$ , is connected between the supply and the cathode of the LM4040.  $R_S$  must be set properly, as it sets the total current available to supply the load ( $I_L$ ) and bias the LM4040 ( $I_Z$ ). In all cases,  $I_Z$  must stay within a specified range for proper operation of the reference. Taking into consideration one extreme in the variation of the load and supply voltage (maximum  $I_L$  and minimum  $V_S$ ),  $R_S$  must be small enough to supply the minimum  $I_Z$  required for operation of the regulator, as given by data-sheet parameters. At the other extreme, maximum  $V_S$  and minimum  $I_L$ ,  $R_S$  must be large enough to limit  $I_Z$  to less than its maximum-rated value of 15 mA.

$R_S$  is calculated according to Equation 1:

$$R_S = \frac{(V_S - V_Z)}{(I_L + I_Z)} \quad (1)$$

Figure 7. Shunt Regulator

### 8.2.2.3 Output Capacitor

The LM4040 does not require an output capacitor across cathode and anode for stability. However, if an output bypass capacitor is desired, the LM4040 is designed to be stable with all capacitive loads.

### 8.2.2.4 SOT-23 Connections

There is a parasitic Schottky diode connected between pins 2 and 3 of the SOT-23 packaged device. Thus, pin 3 of the SOT-23 package must be left floating or connected to pin 2.

### 8.2.2.5 Start-Up Characteristics

In any data conversion system, start-up characteristics are important, as to determine when it is safe begin conversion based upon a steady and settled reference value. As shown in Figure 9 it is best to allow for  $>20\mu\text{s}$  from supply start-up to begin conversion.

Figure 8. Test Circuit

### 8.2.3 Application Curve

Figure 9. Startup Response

## 9 Power Supply Recommendations

In order to not exceed the maximum cathode current, be sure that the supply voltage is current limited.

For applications shunting high currents (15 mA max), pay attention to the cathode and anode trace lengths, adjusting the width of the traces to have the proper current density.

## 10 Layout

### 10.1 Layout Guidelines

Figure 10 shows an example of a PCB layout of LM4040XXXDBZ. Some key  $V_{ref}$  noise considerations are:

- Connect a low-ESR, 0.1- $\mu$ F ( $C_L$ ) ceramic bypass capacitor on the cathode pin node.
- Decouple other active devices in the system per the device specifications.
- Using a solid ground plane helps distribute heat and reduces electromagnetic interference (EMI) noise pickup.
- Place the external components as close to the device as possible. This configuration prevents parasitic errors (such as the Seebeck effect) from occurring.
- Do not run sensitive analog traces in parallel with digital traces. Avoid crossing digital and analog traces if possible and only make perpendicular crossings when absolutely necessary.

### 10.2 Layout Example

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## DCK (R-PDSO-G5)

## PLASTIC SMALL-OUTLINE PACKAGE

4093553-3/G 01/2007

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - Falls within JEDEC MO-203 variation AA.

DCK (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 THICK STENCIL  
SCALE:15X

4214838/C 04/2017

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
7. Board assembly site may have different recommendations for stencil design.

Images above are just a representation of the package family, actual package may vary.  
Refer to the product data sheet for package details.

**TO-92 - 5.34 mm max height**

Technical drawing of a connector assembly showing three views: a side view on the left, a top view in the center, and a partial side view on the right. The drawing includes dimensions in millimeters and inches, and labels for features like 'SEATING PLANE' and 'EJECTOR PIN OPTIONAL'.

**Dimensions:**

- Top View (Center):**
  - Overall width: 5.21 (4.44)
  - Distance from top edge to seating plane: 5.34 (4.32)
  - Distance from seating plane to bottom edge: 3X 12.7 MIN
  - Distance from centerline to side edge: 3X 0.55 (0.38)
  - Distance from centerline to bottom edge: 2X 1.27 ± 0.13
  - Distance from centerline to side edge (inner): 6X 0.076 MAX
  - Distance from centerline to side edge (outer): 3X 0.43 (0.35)
- Side View (Left):**
  - Distance from top edge to seating plane: 2X 4 MAX
  - Distance from centerline to side edge: 2X 2.6 ± 0.2
- Partial Side View (Right):**
  - Distance from top edge to seating plane: 2X 4 MAX
  - Distance from centerline to side edge: 2X 2.6 ± 0.2
