

具有可配置电压转换和三态输出的 SN74AXC4T245-Q1 汽车 4 位双电源总线收发器

1 特性

- 符合面向汽车应用的 AEC-Q100 标准
- 采用可湿侧面 QFN (WBQB) 封装
- 完全可配置的双轨设计可允许各个端口在 0.65V 至 3.6V 的电源电压范围内运行
- 工作温度范围为 -40°C 至 +125°C
- 多向控制引脚，支持同步升降转换
- 无干扰电源定序
- 从 1.8V 转换到 3.3V 时，支持高达 380Mbps 的转换速率
- V_{CC} 隔离特性：
 - 如果任何一个 V_{CC} 输入低于 100mV，则所有 I/O 输出均禁用且处于高阻抗状态
- I_{off} 支持局部断电模式运行
- 兼容 AVC 系列电平转换器
- 闩锁性能超过 100mA，符合 JESD 78 II 类规范
- ESD 保护性能超过 JEDEC JS-001 规范要求
 - 8000V 人体放电模型
 - 1000V 充电器件模型

2 应用

- 信息娱乐系统音响主机
- ADAS 融合
- ADAS 前置摄像头
- 混合动力电动汽车和电动汽车电池管理系统
- 远程信息处理控制单元

3 说明

符合 AEC-Q100 标准的 SN74AXC4T245-Q1 器件是一款采用两个独立可配置电源轨的四位同相总线收发器。 V_{CCA} 和 V_{CCB} 电源电压低至 0.65V 时，该器件可正常工作。A 端口用于跟踪 V_{CCA} ，该端口可支持 0.65V 至 3.6V 范围内的任何电源电压。B 端口用于跟踪 V_{CCB} ，该端口也可支持 0.65V 至 3.6V 范围内的任何电源电压。此外，SN74AXC4T245-Q1 还与单电源系统兼容。

SN74AXC4T245-Q1 器件旨在实现数据总线之间的异步通信。根据方向控制输入 (DIR1 和 2DIR) 的逻辑电平，此器件将数据从 A 总线传输至 B 总线，或者将数据从 B 总线传输至 A 总线。输出使能输入 (1OE 和 2OE) 可用于禁用输出，从而有效隔离总线。SN74AXC4T245-Q1 器件旨在使控制引脚 (xDIR 和 xOE) 以 V_{CCA} 为基准。

为了确保电平转换器 I/O 在加电或断电期间处于高阻抗状态，xOE 引脚应通过一个上拉电阻器连接至 V_{CCA} 。

该器件完全适合使用 I_{off} 电流的局部断电应用。当器件断电时， I_{off} 保护电路可确保不从输入、输出或偏置到特定电压的组合 I/O 获取多余电流，也不向其提供多余电流。

V_{CC} 隔离特性可确保当 V_{CCA} 或 V_{CCB} 低于 100mV 时，I/O 端口均禁用其输出并进入高阻态。

无干扰电源定序使电源轨能以任何顺序打开或关断，从而提供强大的电源定序性能。

- (1) Stresses beyond those listed under [Absolute Maximum Ratings](#) may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under [Recommended Operating Conditions](#). Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input voltage and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The output positive-voltage rating may be exceeded up to 4.2 V maximum if the output current rating is observed.

8 Detailed Description

8.1 Overview

The SN74AXC4T245-Q1 AEC-Q100 qualified device is a 4-bit, dual-supply noninverting bidirectional voltage level translation device. Ax pins and control pins (1DIR, 2DIR, 1 $\overline{\text{OE}}$, and 2 $\overline{\text{OE}}$) are referenced to V_{CCA} logic levels, and Bx pins are referenced to V_{CCB} logic levels. The A port is able to accept I/O voltages ranging from 0.65 V to 3.6 V, while the B port can accept I/O voltages from 0.65 V to 3.6 V. A high on DIR allows data transmission from A to B and a low on DIR allows data transmission from B to A when $\overline{\text{OE}}$ is set to low. When $\overline{\text{OE}}$ is set to high, both Ax and Bx pins are in the high-impedance state. See [Device Functional Modes](#) for a summary of the operation of the control logic.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Standard CMOS Inputs

Standard CMOS inputs are high impedance and are typically modeled as a resistor in parallel with the input capacitance given in the [Electrical Characteristics](#). The worst case resistance is calculated with the maximum input voltage, given in the [Absolute Maximum Ratings](#), and the maximum input leakage current, given in the [Electrical Characteristics](#), using ohm's law ($R = V \div I$).

Signals applied to the inputs need to have fast edge rates, as defined by $\Delta t/\Delta v$ in [Recommended Operating Conditions](#) to avoid excessive current consumption and oscillations. If a slow or noisy input signal is required, a device with a Schmitt-trigger input should be used to condition the input signal prior to the standard CMOS input.

8.3.2 Balanced High-Drive CMOS Push-Pull Outputs

A balanced output allows the device to sink and source similar currents. The high drive capability of this device creates fast edges into light loads so routing and load conditions should be considered to prevent ringing. Additionally, the outputs of this device are capable of driving larger currents than the device can sustain without being damaged. The electrical and thermal limits defined in the *Absolute Maximum Ratings* must be followed at all times.

8.3.3 Partial Power Down (I_{off})

The inputs and outputs for this device enter a high-impedance state when the device is powered down, inhibiting current backflow into the device. The maximum leakage into or out of any input or output pin on the device is specified by I_{off} in the [Electrical Characteristics](#).

8.3.4 V_{CC} Isolation

The inputs and outputs for this device enter a high-impedance state when either supply is <100 mV.

8.3.5 Over-Voltage Tolerant Inputs

Input signals to this device can be driven above the supply voltage so long as they remain below the maximum input voltage value specified in the [Recommended Operating Conditions](#).

8.3.6 Glitch-Free Power Supply Sequencing

Either supply rail may be powered on or off in any order without producing a glitch on the I/Os (that is, where the output erroneously transitions to VCC when it should be held low). Glitches of this nature can be misinterpreted by a peripheral as a valid data bit, which could trigger a false device reset of the peripheral, a false device configuration of the peripheral, or even a false data initialization by the peripheral. For more information regarding the power up glitch performance of the AXC family of level translators, see [Glitch Free Power Sequencing With AXC Level Translators](#).

8.3.7 Negative Clamping Diodes

The inputs and outputs to this device have negative clamping diodes as depicted in [图 8-1](#).

CAUTION

Voltages beyond the values specified in the [Absolute Maximum Ratings](#) table can cause damage to the device. The input negative-voltage and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

图 8-1. Electrical Placement of Clamping Diodes for Each Input and Output

8.3.8 Fully Configurable Dual-Rail Design

Both the V_{CCA} and V_{CCB} pins can be supplied at any voltage from 0.65 V to 3.6 V, making the device suitable for translating between any of the voltage nodes (0.7 V, 0.8 V, 0.9 V, 1.2 V, 1.8 V, 2.5 V, and 3.3 V).

8.3.9 Supports High-Speed Translation

The SN74AXC4T245-Q1 device can support high data-rate applications. The translated signal data rate can be up to 380 Mbps when the signal is translated from 1.8 V to 3.3 V.

8.3.10 Wettable Flanks

This device includes wettable flanks for at least one package. See the *Features* section on the front page of the data sheet for which packages include this feature.

图 8-2. Simplified Cutaway View of Wettable-Flank QFN Package and Standard QFN Package After Soldering

Wettable flanks help improve side wetting after soldering which makes QFN packages easier to inspect with automatic optical inspection (AOI). A wettable flank can be dimpled or step-cut to provide additional surface area for solder adhesion which assists in reliably creating a side fillet as shown in 图 8-2. Please see the mechanical drawing for additional details.

8.4 Device Functional Modes

表 8-1. Function Table (Each 2-Bit Section)

CONTROL INPUTS ^{(1) (2)}		PORT STATUS		OPERATION
OE	DIR	A PORT	B PORT	
L	L	Output (Enabled)	Input (Hi-Z)	B data to A bus

(1) Input circuits of the data I/Os are always active.

(2) Pins configured as inputs should not be left floating.

9 Application and Implementation

Note

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

9.1 Application Information

The AEC-Q100 qualified SN74AXC4T245-Q1 device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The SN74AXC4T245-Q1 device is ideal for use in applications where a push-pull driver is connected to the data I/Os. The maximum data rate can be up to 380 Mbps when device translates a signal from 1.8 V to 3.3 V.

图 9-1 shows an example application where the SN74AXC4T245-Q1 device is used to translate a low voltage UART signal from an SoC to a higher voltage signal which properly drives the inputs of the Bluetooth® module, and vice versa.

9.2 Typical Application

图 9-1. UART Interface Application

9.2.1 Design Requirements

For this design example, use the parameters listed in 表 9-1.

表 9-1. Design Parameters

DESIGN PARAMETERS	EXAMPLE VALUES
Input voltage range	0.65 V to 3.6 V
Output voltage range	0.65 V to 3.6 V

9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range:
 - Use the supply voltage of the device that is driving the SN74AXC4T245-Q1 device to determine the input voltage range. For a valid logic-high, the value must exceed the high-level input voltage (V_{IH}) of the input port. For a valid logic low the value must be less than the low-level input voltage (V_{IL}) of the input port.
- Output voltage range:
 - Use the supply voltage of the device that the SN74AXC4T245-Q1 device is driving to determine the output voltage range.

9.2.3 Application Curve

图 9-2. Up Translation at 2.5 MHz (0.7 V to 3.3 V)

10 Power Supply Recommendations

Always apply a ground reference to the GND pins first. This device is designed for glitch free power sequencing without any supply sequencing requirements such as ramp order or ramp rate.

This device was designed with various power supply sequencing methods in mind to help prevent unintended triggering of downstream devices. For more information regarding the power up glitch performance of the AXC family of level translators, see [Glitch Free Power Sequencing With AXC Level Translators](#).

11 Layout

11.1 Layout Guidelines

To ensure reliability of the device, following common printed-circuit board layout guidelines are recommended:

- Use bypass capacitors on the power supply pins and place them as close to the device as possible.
- Use short trace lengths to avoid excessive loading.

11.2 Layout Example

12.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
