

TS3L110 四路 SPDT 高带宽 10/100 Base-T LAN 开关

差分 8 通道至 4 通道多路复用器/多路信号分离器

1 特性

- 高带宽 (BW = 500MHz, 典型值)
- 低串扰 ($X_{TALK} = -30\text{dB}$, 典型值)
- 具有接近零传播延迟的双向数据流
- 平缓的低导通状态电阻
($r_{on} = 4\Omega$ 典型值, $r_{on(Flat)} = 1\Omega$)
- 可在数据 I/O 端口 (0 至 5V) 上进行开关
- V_{CC} 工作范围为 3V 至 3.6V
- I_{off} 支持局部断电模式运行
- 数据和控制输入具有下冲钳位二极管
- 闩锁性能超过 100mA, 符合 JESD 78 II 类规范
- ESD 性能测试符合 JESD 22 标准
 - 2000V 人体放电模型 (A114-B, II 类)
 - 1000V 充电器件模型 (C101)
- 适合 10 Base-T 和 100 Base-T 信令

2 应用

- 10 和 100 Base-T 信号开关

3 说明

TS3L110 局域网 (LAN) 开关是一款具有单开关使能端 (\bar{E}) 输入的 4 位、2 选 1 多路复用器/多路信号分离器。当 \bar{E} 为低时, 开关启用, I 端口连接至 Y 端口。当 \bar{E} 为高时, 开关禁用, I 和 Y 端口之间存在高阻抗状态。选择 (S) 输入可控制多路复用器/多路信号分离器的数据路径。

TS3L110 器件可用于代替 LAN 应用中的机械继电器。此器件具有平缓的低导通状态电阻 (r_{on})、高带宽和低串扰, 适合 10/100 Base-T 和各种其他 LAN 应用中的数字输入 D 类音频放大器。TS3L110 器件可用于将信号从 10/100 Base-T 以太网收发器路由至笔记本电脑或扩展坞中的 RJ-45 LAN 连接器。此器件专为低通道间偏差和低串扰而设计。

该器件完全适用于 I_{off} 为了部分断电的应用。 I_{off} 特性可确保在关断时防止损坏电流通过器件回流。该器件可在关断时提供隔离。

为了确保加电或断电期间的高阻抗状态, \bar{E} 应通过一个上拉电阻器连接至 V_{CC} ; 该电阻器的最小值由驱动器的电流吸入能力来决定。

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (4) V_I and V_O are used to denote specific conditions for $V_{I/O}$.
- (5) I_I and I_O are used to denote specific conditions for $I_{I/O}$.
- (6) The package thermal impedance is calculated in accordance with JESD 51-7.
- (7) The package thermal impedance is calculated in accordance with JESD 51-5.

8 Detailed Description

8.1 Overview

The TI TS3L110 LAN switch is a 4-bit 1-of-2 multiplexer/demultiplexer with a single switch-enable (E) input. When E is low, the switch is enabled, and the I port is connected to the Y port. When E is high, the switch is disabled, and the high-impedance state exists between the I and Y ports. The select (S) input controls the data path of the multiplexer/demultiplexer.

8.2 Functional Block Diagram

8.3 Feature Description

I_{off} supports Partial-Power-Down Mode Operation.

The TS3L110 device ensures the signal path is high impedance state when V_{CC} = 0 V.

8.4 Device Functional Modes

The TS3L110 supports a power down mode which reduces the current consumption of the device and places all the signal paths in a high impedance state. To place the TS3L100 in power down mode, set the \bar{E} pin with a logic high voltage as seen in Table 1.

Table 1. Function Table

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

There are many Local Area Network (LAN) applications in which the ethernet hubs or controllers have a limited number of I/Os or need to route signals from a single ethernet PHY to multiple ethernet jacks. The TS3L110 solution can effectively expand the limited I/Os by switching between multiple Ethernet jacks to interface them to a single Ethernet PHY.

9.2 Typical Application

Figure 10. Typical Application Schematic

9.2.1 Design Requirements

Ensure that all of the signals passing through the switch are within the recommended operating ranges. To ensure proper performance, see Recommended Operating Conditions.

9.2.2 Detailed Design Procedure

The TS3L110 can be properly operated without any external components. TI recommends that the digital control pins S and E-bar be pulled up to VCC or down to GND to avoid undesired switch positions that could result from the floating pin. Connect the exposed thermal pad to ground.

Typical Application (continued)

9.2.3 Application Curves

Phase at 627 MHz, -36 Deg

Gain -3 dB at 627 MHz

Figure 11. Gain and Phase vs Frequency

10 Power Supply Recommendations

Power to the device is supplied through the VCC pins. TI recommends placing a bypass capacitor as close to the supply pin (VCC) as possible to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

11 Layout

11.1 Layout Guidelines

- TI recommends keeping the high-speed signals as short as possible.
- Each via introduces discontinuities in the transmission line of the signal and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.
- When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.
- Do not route traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices or ICs that use or duplicate clock signals.
- Avoid stubs on the high-speed signals because they cause signal reflections. If a stub is unavoidable, then the stub must be less than 200 mm.
- Route all high-speed signal traces over continuous GND planes, with no interruptions. Avoid crossing over anti-etch, commonly found with plane splits.
- Due to high-frequency signals, a printed-circuit board with at least four layers is recommended; two signal layers separated by a ground and power layer as shown in [Figure 12](#).
- The majority of signal traces must run on a single layer, preferably Signal 1. Immediately next to this layer should be the GND plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies.

12.4 静电放电警告

ESD 可能会损坏该集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理措施和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.
