

LMK1D1204P 带引脚控制的 OE 低附加抖动 LVDS 缓冲器

1 特性

- 具有 2 个输入和 4 个输出 (2:4) 的高性能 LVDS 时钟缓冲器系列。
- 输出频率最高可达 2GHz。
- 通过硬件引脚实现独立输出使能/禁用。
- 电源电压：1.8/2.5/3.3V $\pm$ 5%
- 低附加抖动：156.25MHz 下最大抖动小于 60fs rms (12kHz 至 20MHz)
 - 超低相位本底噪声：-164dBc/Hz (典型值)
- 超低传播延迟：< 575ps (最大值)
- 输出偏斜：20ps (最大值)
- 通用输入接受 LVDS、LVPECL、LVCMOS、HCSL 和 CML
- LVDS 基准电压 (V_{AC_REF}) 适用于容性耦合输入
- 工业温度范围：-40°C 至 105°C
- 可用封装：
 - 5mm $\times$ 5mm 28 引脚 VQFN (RHD) 封装

2 应用

- 电信及网络
- 医疗成像
- 测试和测量
- 无线基础设施
- 专业音频、视频和标牌

3 说明

LMK1D1204P 时钟缓冲器能够以超小的时钟分配偏斜，将两个可选时钟输入 (IN0 和 IN1) 之一分配给 4 对差分 LVDS 时钟输出 (OUT0 至 OUT3)。输入可以为 LVDS、LVPECL、LVCMOS、HCSL 或 CML。

LMK1D1204P 专为驱动 50 Ω 传输线路而设计。在以单端模式驱动输入的情况下，必须将图 8-6 中所示的适当偏置电压施加到未使用的负输入引脚。IN_SEL 引脚用于选择要发送到输出的输入。该器件支持失效防护输入功能。该器件还整合了输入迟滞，可防止在没有输入信号的情况下输出随机振荡。

各个 LVDS 差分输出均可通过将对应的 OEx 引脚设置为逻辑高电平“1”来使能。如果此引脚设置为逻辑低电平“0”，输出将以高阻抗状态被禁用，从而降低功耗。

该器件可在 1.8V、2.5V 或 3.3V 电源环境下工作，温度范围是 -40°C 至 105°C (环境温度)。

器件信息

5 Pin Configuration and Functions

图 5-1. LMK1D1204P: RHD Package 28-Pin VQFN Top View

表 5-1. Pin Functions

NAME	PIN	TYPE ⁽¹⁾	DESCRIPTION
DIFFERENTIAL/SINGLE-ENDED CLOCK INPUT			
IN0_P, IN0_N	9, 10	I	Primary: Differential input pair or single-ended input
IN1_P, IN1_N	5, 6	I	Secondary: Differential input pair or single-ended input. Note that INP0, INN0 are used indistinguishably with IN0_P, IN0_N.
INPUT SELECT			
IN_SEL	2	I	Input Selection with an internal 500-k Ω pullup and 320-k Ω pulldown, selects input port. See 表 8-1.
OUTPUT ENABLE			
OE0	13	I	Output Enable for channel 0 HIGH (default): Enable output channel 0 LOW: Disable output channel 0 in Hi-Z state
OE1	19	I	Output Enable for channel 1 HIGH (default): Enable output channel 1 LOW: Disable output channel 1 in Hi-Z state
OE2	24	I	Output Enable for channel 2 HIGH (default): Enable output channel 2 LOW: Disable output channel 2 in Hi-Z state
OE3	3	I	Output Enable for channel 3 HIGH (default): Enable output channel 3 LOW: Disable output channel 3 in Hi-Z state
BIAS VOLTAGE OUTPUT			
V _{AC_REF0} , V _{AC_REF1}	11, 7	O	Bias voltage output for capacitive-coupled inputs. If used, TI recommends using a 0.1- μ F capacitor to GND on this pin.
DIFFERENTIAL CLOCK OUTPUT			
OUT0_P, OUT0_N	16, 17	O	Differential LVDS output pair number 0
OUT1_P, OUT1_N	20, 21	O	Differential LVDS output pair number 1
OUT2_P, OUT2_N	22, 23	O	Differential LVDS output pair number 2
OUT3_P, OUT3_N	26, 27	O	Differential LVDS output pair number 3
SUPPLY VOLTAGE			

表 5-1. Pin Functions (continued)

NAME	PIN	TYPE ⁽¹⁾	DESCRIPTION
V _{DD}	8, 15, 28	P	Device Power Supply (1.8 V or 2.5 V or 3.3 V)
GROUND			
GND	1, 14	G	Ground
MISC			
DAP	DAP	GND	Die Attach Pad. Connect to the PCB ground plane for heat dissipation.
NC	4, 12, 18, 25	NC	No Connection

(1) G = Ground, I = Input, O = Output, P = Power

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{DD}	Supply voltage	– 0.3	3.6	V
V _{IN}	Input voltage	– 0.3	3.6	V
V _O	Output voltage	– 0.3	V _{DD} + 0.3	V
I _{IN}	Input current	– 20	20	mA
I _O	Continuous output current	– 50	50	mA
T _J	Junction temperature		135	°C
T _{stg}	Storage temperature ⁽²⁾	– 65	150	°C

(1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

(2) Device unpowered

6.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±3000	V
		Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002, all pins ⁽²⁾	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V _{DD}	Core supply voltage	3.3-V supply	3.135	3.3	3.465	V
		2.5-V supply	2.375	2.5	2.625	
		1.8-V supply	1.71	1.8	1.89	
Supply Ramp	Supply voltage ramp	Requires monotonic ramp (10-90% of V _{DD})	0.1		20	ms
T _A	Operating free-air temperature		– 40		105	°C
T _J	Operating junction temperature		– 40		135	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		LMK1D1204P	UNIT
		RHD (VQFN)	
		28 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	38.9	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	32.1	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	18.7	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	1	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	18.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	8.2	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

VDD = 1.8 V ± 5 %, -40°C ≤ T_A ≤ 105°C. Typical values are at VDD = 1.8 V, 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT

图 7-7. Output AC Common Mode

8 Detailed Description

8.1 Overview

The LMK1D1204P LVDS drivers use CMOS transistors to control the output current. Therefore, proper biasing and termination are required to ensure correct operation of the device and to maximize signal integrity.

The proper LVDS termination for signal integrity over two 50- Ω lines is 100 Ω between the outputs on the receiver end. Either DC-coupled termination or AC-coupled termination can be used for LVDS outputs. TI recommends placing a termination resistor close to the receiver. If the receiver is internally biased to a voltage different than the output common-mode voltage of the LMK1D1204P, AC-coupling must be used. If the LVDS receiver has internal 100- Ω termination, external termination must be omitted.

8.2 Functional Block Diagram

8.3 Feature Description

The LMK1D1204P is a low additive jitter LVDS fan-out buffer that can generate up to four copies of two selectable LVPECL, LVDS, HCSL, CML, or LVCMOS inputs. The LMK1D1204P can accept reference clock frequencies up to 2 GHz while providing low output skew.

8.3.1 Fail-Safe Input

The LMK1D1204P is designed to support fail-safe input operation feature. This feature allows the user to drive the device inputs before V_{DD} is applied without damaging the device. Refer to [Specifications](#) for more information on the maximum input supported by the device.

8.4 Device Functional Modes

The two inputs of the LMK1D1204P are internally muxed together and can be selected through the control pin (see [表 8-1](#)). Unused inputs can be left floating to reduce overall component cost. Both AC- and DC-coupling schemes can be used with the LMK1D1204P to provide greater system flexibility.

表 8-1. Input Selection Table

IN_SEL	ACTIVE CLOCK INPUT
0	IN0_P, IN0_N
1	IN1_P, IN1_N
Open	None ⁽¹⁾

- (1) The input buffers are disabled and the state of the outputs are dependent on the state of OEx (see [表 8-2](#)). If OEx = 0, the corresponding output will be disabled in Hi-Z state, whereas if OEx = 1 (default), the corresponding output will be logic low.

The outputs of the LMK1D1204P can be individually enabled or disabled using the OEx hardware pins. (see [表 8-2](#)). The disabled state of the outputs is Hi-Z (high impedance) as this reduces the power consumption and also prevents back-biasing of the devices connected to these outputs.

Unused outputs should be disabled to eliminate the need for a termination resistor. In the case of enabled unused outputs, TI recommends a 100 ohm termination for optimal performance.

表 8-2. Output Control Table

OEx	CLOCK OUTPUTS
0	OUTPx, OUTNx disabled in Hi-Z state
1 (default)	OUTPx, OUTNx enabled

8.4.1 LVDS Output Termination

TI recommends that unused outputs are terminated differentially with a $100\text{-}\Omega$ resistor for optimum performance, although unterminated outputs are also okay but will result in slight degradation in performance (Output AC common-mode VOS) in the outputs being used.

The LMK1D1204P can be connected to LVDS receiver inputs with DC- and AC-coupling as shown in 图 8-1 and 图 8-2 (respectively).

图 8-1. Output DC Termination

图 8-2. Output AC Termination (With the Receiver Internally Biased)

8.4.2 Input Termination

The LMK1D1204P inputs can be interfaced with LVDS, LVPECL, HCSL or LVCMOS drivers.

LVDS drivers can be connected to LMK1D1204P inputs with DC- and AC-coupling as shown 图 8-3 and 图 8-4 (respectively).

图 8-3. LVDS Clock Driver Connected to LMK1D1204P Input (DC-Coupled)

图 8-4. LVDS Clock Driver Connected to LMK1D1204P Input (AC-Coupled)

图 8-5 shows how to connect LVPECL inputs to the LMK1D1204P. The series resistors are required to reduce the LVPECL signal swing if the signal swing is $>1.6 V_{PP}$.

图 8-5. LVPECL Clock Driver Connected to LMK1D1204P Input

图 8-6 shows how to couple a LVCMOS clock input to the LMK1D1204P directly.

图 8-6. 1.8-V/2.5-V/3.3-V LVCMOS Clock Driver Connected to LMK1D1204P Input

For unused input, TI recommends grounding both input pins (INP, INN) using 1-k Ω resistors.

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

The LMK1D1204P is a low additive jitter universal to LVDS fan-out buffer with 2 selectable inputs and pin controlled output enables. The small package, low output skew, low propagation delay and low additive jitter make this device suitable for applications that require high performance clock distribution as well as for low power and space constraint applications.

9.2 Typical Application

图 9-1. Fan-Out Buffer for Line Card Application

9.2.1 Design Requirements

The LMK1D1204P shown in [Figure 9-1](#) is configured to select two inputs: a 156.25-MHz LVDS clock from the backplane, or a secondary 156.25-MHz LVCMOS 2.5-V oscillator. The LVDS clock is AC-coupled and biased using the integrated reference voltage generator. A resistor divider is used to set the threshold voltage correctly for the LVCMOS clock. 0.1- μ F capacitors are used to reduce noise on both V_{AC_REF} and $SECREP_N$. Either input signal can be then fanned out to desired devices, as shown. The configuration example is driving 4 LVDS receivers in a line card application with the following properties:

- The PHY device is capable of DC-coupling with an LVDS driver such as the LMK1D1204P. This PHY device features internal termination so no additional components are required for proper operation.
- The ASIC LVDS receiver features internal termination and operates at the same common-mode voltage as the LMK1D1204P. Again, no additional components are required.
- The FPGA requires external AC-coupling, but has internal termination. 0.1- μ F capacitors are placed to provide AC-coupling. Similarly, the CPU is internally terminated, and requires only external AC-coupling capacitors.
- The unused outputs of the LMK1D1204P can be disabled using the corresponding OEx pin. This results in a lower power consumption.

9.2.2 Detailed Design Procedure

See [Input Termination](#) for proper input terminations, dependent on single-ended or differential inputs.

See [LVDS Output Termination](#) for output termination schemes depending on the receiver application.

Unused outputs can be disabled using the corresponding OEx pin setting according to the [Table 8-2](#). Disabling the outputs also eliminates requirement of termination resistors.

In this example, the PHY, ASIC, and FPGA or CPU require different schemes. Power supply filtering and bypassing is critical for low-noise applications.

See [Power Supply Recommendations](#) for recommended filtering techniques. A reference layout is provided in [Low-Additive Jitter, Four LVDS Outputs Clock Buffer Evaluation Board](#) (SCAU043).

9.2.3 Application Curves

This section shows the low additive noise for the LMK1D1204P below. The low noise 156.25-MHz source with 24-fs RMS jitter shown in 图 9-2 drives the LMK1D1204P, resulting in 46.4-fs RMS when integrated from 12 kHz to 20 MHz (图 9-3). The resultant additive jitter is 39.7-fs RMS for this configuration.

Reference signal is low-noise Rhode and Schwarz SMA100B

图 9-2. LMK1D1204P Reference Phase Noise, 156.25 MHz, 24-fs RMS (12 kHz to 20 MHz)

图 9-3. LMK1D1204P Output Phase Noise, 156.25 MHz, 46.4-fs RMS (12 kHz to 20 MHz)

10 Power Supply Recommendations

High-performance clock buffers are sensitive to noise on the power supply, which can dramatically increase the additive jitter of the buffer. Thus, it is essential to reduce noise from the system power supply, especially when jitter or phase noise is critical to applications.

Filter capacitors are used to eliminate the low-frequency noise from the power supply, where the bypass capacitors provide the low impedance path for high-frequency noise and guard the power-supply system against the induced fluctuations. These bypass capacitors also provide instantaneous current surges as required by the device and must have low equivalent series resistance (ESR). To properly use the bypass capacitors, they must be placed close to the power-supply pins and laid out with short loops to minimize inductance. TI recommends adding as many high-frequency (for example, 0.1- μF) bypass capacitors as there are supply pins in the package. TI recommends, but does not require, inserting a ferrite bead between the board power supply and the chip power supply that isolates the high-frequency switching noises generated by the clock driver; these beads prevent the switching noise from leaking into the board supply. Choose an appropriate ferrite bead with low DC-resistance because it is imperative to provide adequate isolation between the board supply and the chip supply, as well as to maintain a voltage at the supply pins that is greater than the minimum voltage required for proper operation.

图 10-1 shows this recommended power-supply decoupling method.

图 10-1. Power Supply Decoupling

11 Layout

11.1 Layout Guidelines

For reliability and performance reasons, the die temperature must be limited to a maximum of 135°C.

The device package has an exposed pad that provides the primary heat removal path to the printed-circuit board (PCB). To maximize the heat dissipation from the package, a thermal landing pattern including multiple vias to a ground plane must be incorporated into the PCB within the footprint of the package. The thermal pad must be soldered down to ensure adequate heat conduction to of the package. 图 11-1 and 图 11-2 show a recommended land and via pattern for the 28-pin LMK1D1204P device.

11.2 Layout Example

12.2 支持资源

TI E2E™ 支持论坛是工程师的重要参考资料，可直接从专家获得快速、经过验证的解答和设计帮助。搜索现有解答或提出自己的问题可获得所需的快速设计帮助。

链接的内容由各个贡献者“按原样”提供。这些内容并不构成 TI 技术规范，并且不一定反映 TI 的观点；请参阅 TI 的《使用条款》。

12.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

所有商标均为其各自所有者的财产。

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.5 术语表

TI 术语表 本术语表列出并解释了术语、首字母缩略词和定义。

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**RHD0028B****PACKAGE OUTLINE****VQFN - 1 mm max height**

PLASTIC QUAD FLATPACK - NO LEAD

**NOTES:**

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

EXAMPLE BOARD LAYOUT

RHD0028B

VQFN - 1 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

NOTES: (continued)

- This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/sluea271).
- Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.

EXAMPLE STENCIL DESIGN**RHD0028B****VQFN - 1 mm max height**

PLASTIC QUAD FLATPACK - NO LEAD

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

重要声明和免责声明

TI 提供技术和可靠性数据 (包括数据表)、设计资源 (包括参考设计)、应用或其他设计建议、网络工具、安全信息和其他资源, 不保证没有瑕疵且不做任何明示或暗示的担保, 包括但不限于对适销性、某特定用途方面的适用性或不侵犯任何第三方知识产权的暗示担保。

这些资源可供使用 TI 产品进行设计的熟练开发人员使用。您将自行承担以下全部责任: (1) 针对您的应用选择合适的 TI 产品, (2) 设计、验证并测试您的应用, (3) 确保您的应用满足相应标准以及任何其他安全、安保或其他要求。这些资源如有变更, 恕不另行通知。TI 授权您仅可将这些资源用于研发本资源所述的 TI 产品的应用。严禁对这些资源进行其他复制或展示。您无权使用任何其他 TI 知识产权或任何第三方知识产权。您应全额赔偿因在这些资源的使用中对 TI 及其代表造成的任何索赔、损害、成本、损失和债务, TI 对此概不负责。

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LMK1D1204PRHDR	ACTIVE	VQFN	RHD	28	3000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 105	LMK1D 1204P	Samples
LMK1D1204PRHDT	ACTIVE	VQFN	RHD	28	250	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 105	LMK1D 1204P	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
